Note: Indexes for the most recent six months shown are subject to revision.

Nota: Les indices figurant pour les six mois les plus récents sont sujets à révision.

(1) The aggregation of indexes by commodities or by industries should produce the same grand total. When these totals occasionally differ due to rounding, the All Commodities Index shall be regarded as authoritative, and the All Manufacturing Industries is adjusted to match.

(1) L'agrégation des indices par produits ou par industries devraient résulter ou même grand total. Iorsque ces totaux diffèrent occasionnellement en raison de l'arrondissement, l'indice total - tous les produits devra être considéré comme celui qui fait autorité, et l'indice total - toutes les industries manufacturières sera

posé égal. The numeric code to the right of the CANSIM databank number on the last line of each series is the 1980 Standard Industrial Classification (SIC) code. An explanation of the percentage figures (coverage measure) shown to the right of the SIC can be found at the end of Table 2. These coverage measures are rounded to the nearest 5% to preserve confidentiality. Le code numericipue à la droite du numero Databank de CANSIM apparaissant à la ligne du bas de chaque série est le code de la Classification type des industries (CTI) de 1980. Une explication des données en pourcentage (mesure de degré de couverture) apparaissant à la droite du numero Databank de CANSIM apparaissant à la droite du numero Databank de CANSIM apparaissant à la droite du code CTI est disponible à la fin du tableau 2. Ces mesures de degré de couverture sont arrondies au 5% le plus préserver la confidentialité. (2)

Monthly prices are collected and processed three times per annum.
Des prix mensuels sont relevés et calculés trois fois par année.
Indexes for the current year and previous year are subject to revision.
Les indices pour l'année courante et pour l'année précédente sont sujets à révision.

### TABLEAU 6. Indices des prix des matières brutes

1986 = 100

# EXPLANATION OF METHODS USED AND ADDITIONAL SOURCES FOR INDUSTRIAL PRICE INDEXES

### Industrial Product Price Indexes, 1986 = 100

The Industrial Product Price Indexes (IPPI) measure price changes for major commodities sold by Canadian manufacturers. Elemental indexes are calculated for 1314 Principal Commodity Group (PCG) outputs as defined in the 1986 Input/Output (I/O) table. Weights used to aggregate commodity indexes are taken from the output or "Make" matrix of the I/O system which provides an integrated set of commodity values for all manufacturing industries.

Directly surveyed commodities are supported by formal sampling procedures and a quality rating is presented for commodities and aggregations of commodities. Such indexes are derived from prices reported for the 15th of the month or the nearest prior business day for comparable transactions.

Selected indexes are published about five weeks after the reference month in the *Daily Bulletin* (Catalogue 11-001) following a pre-announced schedule of release dates. Simultaneously, all series are available from CANSIM or on request. Catalogue 62-011, *Industry Price Indexes*, is released about four weeks after the Daily Bulletin release. Each series is identified with a CANSIM D number and with a commodity (PCG) or industry (SIC) identifier. Each release of numbers is subject to revision for six months, i.e., when a July index is released, the index for the preceding January becomes final. Exceptions to this rule are announced.

### **Price Surveys**

About 10,000 prices are collected monthly from about 3,500 producers for goods sold, which are valued at the boundary of the establishment, wherein the cost of taxes collected at that point and transportation provided by public carriers beyond that point are excluded. Prices are reported for finely specified transactions wherein both the good and terms of sale are identified. Such collections are instituted for important commodities. Expansions are made to the samples where price movement has a regional dimension or where there are important flows of goods to export markets.

Sampling for any directly surveyed elemental index is usually done by a formal probability sampling procedure, wherein important producers are "must take" respondents and a random selection is taken from the smaller producers. Such samples are redrawn on a regular cycle as dictated by changes in

# EXPLICATION DES MÉTHODES UTILISÉES ET SOURCES SUPPLÉMENTAIRES DES INDICES DES PRIX INDUSTRIELS

### Indices des prix des produits industriels, 1986 = 100

Les indices des prix des produits industriels (IPPI) mesurent les variations des prix des principaux produits vendus par les fabricants canadiens. Les indices élémentaires sont calculés pour 1314 groupes principaux des produits (GPP) tels que définis dans les tableaux d'entrées-sorties de 1986. Les poids servant à agréger les indices des produits proviennent de la matrice des sorties ou de "production" des tableaux d'entrées-sorties. Cette matrice présente un ensemble intégré de valeurs pour les produits à l'intérieur de l'ensemble des industries manufacturières.

Les produits faisant directement l'objet d'un sondage sont basés sur des procédures d'échantillonnage formelles, et une cote de qualité est présentée pour les produits et les agrégats de produits. Ces indices sont calculés à partir des prix déclarés pour le 15 du mois, ou le jour ouvrable précédent le plus proche pour des transactions comparables.

Un certain nombre d'indices sont publiés environ cinq semaines après la fin du mois de référence dans le Quotidien (n° 11-001F au catalogue), selon un calendrier de publication préalablement établi. Simultanément, toutes les séries sont disponibles dans CANSIM ou sur demande. La publication n° 62-011 au catalogue, *Indices des prix de l'industrie*, paraît quatre semaines environ après le communiqué dans le *Quotidien.* Chaque série est identifiée par un numéro D de CANSIM et par un identificateur de produits (GPP) ou de branche d'activité (CTI). Les chiffres publiés pour les six derniers mois sont sujets à révision. Ainsi, lorsque l'indice de juillet est publié, l'indice pour le mois de janvier précédent devient final. Les exceptions à cette règle sont signalées.

### Enquêtes des prix

Environ 10,000 prix sont recueillis chaque mois auprès d'environ 3,500 producteurs pour des biens vendus qui sont évalués à la limite de l'établissement, de sorte que les taxes prélevées à ce point et le coût du transport fourni par les transporteurs communs au-delà de ce point sont exclus. Les prix sont relevés pour des transactions à un niveau très détaillé, qui permet d'identifier le bien et les conditions de vente. De tels relevés sont institués pour les produits importants. Des élargissements sont apportés aux échantillons pour lesquels le mouvement des prix a une dimension régionale, ou pour lesquels il existe un important marché pour l'exportation.

L'échantillonnage pour tout indice élémentaire faisant directement l'objet d'un sondage se fait habituellement par une méthode d'échantillonnage probabiliste, selon laquelle les producteurs importants sont des répondants "obligatoires", tandis que l'on procède à une sélection aléatoire des producteurs moins importants. Ces échantillons

the market. A given elemental index is usually supported by 12 to 15 price quotes, although some are derived from as few as 8 quotes or as many as 30 quotes.

About 700 of the 1314 PCGs in the manufacturing sector are accommodated by direct survey and these account for about 85% of the value of manufacturing output in 1986. The price movement for the remaining 600 PCGs is estimated indirectly from either directly priced PCGs or through borrowing price movement from other price series.

### Weight Base

Commodity and industry weights are taken from the "Make" matrix of the 1986 Input/Output table which, in turn, is derived from 1986 values reported for the Census of Manufacturers and edited to conform to the 1980 Standard Industrial Classification. Within-commodity weights can change in December of each year to reflect major changes in production patterns.

### **Formula**

(agg)

Chained series of fixed weighted price indexes are calculated by a linking procedure whereby more recent varieties and changes to establishments are introduced systematically, as required, in December of each year. Weights from the commodity level through higher levels of aggregation are held constant.

The general formula used for the main aggregations describes the price movement of a specified group of commodities where w<sup>i</sup> are the values of the output of each commodity:

indicates summation over all elements i in

sont reconstruits régulièrement, suivant l'évolution du marché. Un indice élémentaire donné repose habituellement sur 12 à 15 prix, bien que certains peuvent utiliser aussi peu que 8 prix, ou jusqu'à 30 prix.

Environ 700 des 1314 GPP du secteur de la fabrication font l'objet d'une enquête directe, qui couvrent environ 85% de la valeur de la production manufacturière en 1986. Le mouvement des prix des 600 GPP restants est estimé indirectement à partir de GPP faisant directement l'objet d'un sondage, ou en empruntant le mouvement des prix d'autres séries de prix.

### Sources des poids

Les poids des produits et des branches d'activités proviennent de la matrice "production" du tableau d'entrées-sorties de 1986, laquelle à son tour est établie à partir des valeurs de 1986 déclarées pour le recensement des manufactures, et rectifiées afin d'être conforme à la Classification type des industries de 1980. Les poids internes des produits peuvent changer en décembre de chaque année afin d'appréhender les changements importants dans les schémas de la production.

### **Formule**

Les séries en chaîne des indices de prix à pondération fixe sont calculées par une méthode de raccordement suivant laquelle les plus récentes variétés et les changements au niveau de l'univers des entreprises sont incorporés systématiquement, selon les besoins, en décembre de chaque année. Toutefois, les pondérations du niveau des produits jusqu'aux niveaux plus élevés d'agrégation sont maintenues constantes.

La formule générale servant au calcul des agrégations principales décrit les mouvements de prix d'un groupe donné de produits, dans laquelle w<sup>i</sup> sont les valeurs de la production de chaque produit:

$$P_{t/o}^{(agg)} = \sum_{i} \frac{w^{i}}{\sum_{w^{i}}} \cdot P_{t/o}^{i}$$

| P <sub>t/o</sub> | movement between the base period o and time t for the defined aggregate;                   |                  | entre la période de référence o et la période t pour l'agrégat défini;   |

### **Historical Data**

Historical series on the 1986 base for the Industry Price Indexes are available on CANSIM. The historical series are computed for the industry indexes classified under the 1980 Standard Industrial Classification (SIC) and for commodity indexes classified under the Principal Commodity Groups (PCG) classification. The historical series were obtained by linking together movements from the 1986-based Industrial Product Price Indexes (IPPI) series and the corresponding 1981-based Industrial Product Price Indexes (IPPI) series, using the year 1986 as the linking period. An explanatory note on the methods used to compute the historical series, as well as a set of concordance tables between both set of IPPI series are available to the public.

### **Reference Documents**

62-558 Industry Price Indexes, 1986 = 100: users' quide, \$40.00.

This publication describes briefly the economic content of the series and presents a short description of different aggregations produced. In the tables the weighting patterns for both commodities and commodity groupings are shown. Descriptions of the characteristics of the elemental indexes are provided. Comments on index use are also provided.

62-556 Industrial Product Price Indexes, 1981 = 100, Concepts and Methods, \$25.00.

This publication describes the economic content of the series within the framework of the system of national accounts and describes how this affects price index methodology. Sampling and pricing methods are described, as are index calculation and aggregation procedures.

A glossary of terms is also provided.

For further details, please contact Prices Division, Statistics Canada, Ottawa, Ontario K1A 0T6, telephone (613)951-9607 or 951-3350, facsimile (613)951-2848.

### Données historiques

Les séries historiques sur la base 1986 pour les Indices des prix de l'industrie sont disponibles sur CANSIM. Les séries historiques sont calculées pour les indices des industries suivant la Classification type des industries (CTI) de 1980 et pour des indices des produits suivant la classification des Groupes principaux des produits (GPP). Les séries historiques furent obtenues en raccordant ensemble les mouvements des séries des indices des prix des produits industriels (IPPI) basées sur 1986 et des séries correspondantes des indices des prix des produits industriels (IPPI) basées sur 1986 ayant servi de période de raccordement. Une note explicative sur les méthodes utilisées pour calculer les séries historiques de même qu'un ensemble de tableaux montrant les concordances entre les deux ensembles de séries IPPI sont disponibles au public.

### Documents de référence

62-558 Indices des prix de l'industrie, 1986 = 100: guide aux utilisateurs, 40,00 \$.

Cette publication précise sommairement le contenu économique des séries dans un cadre général, de même qu'une brève description des différentes structures d'agrégation. Les tableaux contiennent les schémas de pondération à la fois pour les produits et les agrégats de produits. Y figurent également une description des caractéristiques des indices élémentaires. La publication contient des commentaires sur l'utilisation des indices.

62-556 Indices des prix des produits industriels, 1981 = 100, Concepts et méthodes, 25,00 \$.

Cette publication précise le contenu économique des séries dans le cadre général du système des comptes nationaux, et son impact sur la méthodologie des indices de prix. Elle contient une description des méthodes d'échantillonnage et d'observation des prix, de même que des méthodes de calcul et d'agrégation des indices.

La publication contient également un glossaire.

Pour plus de renseignements, veuillez contacter la Division des prix, Statistique Canada, Ottawa, Ontario K1A 0T6, téléphone (613)951-9607 ou 951-3350, télécopieur (613)951-2848.

### RAW MATERIALS PRICE INDEXES (1986 = 100)

The Raw Materials Price Indexes (RMPI) measure price changes for the purchase of raw materials by Canadian industry. The term "raw material" refers either to a commodity that is sold for the first time after being extracted from nature, or a substitutable recycled product (e.g. metal scrap). For example wheat is considered as a raw material, but wheat flour is not, iron ore is but not pig iron, coal but not electricity. Approximately eighty commodities are priced in the index, grouped into seven major components.

The index and the major group indexes, on a 1986 time base, are published monthly in the Daily Bulletin approximately five weeks after the end of the reference month. They are also available at that time on CANSIM in matrix 2009.

These indexes are a continuation of the previously published Raw Materials Price Indexes, 1981 = 100. The new, 1986 = 100 indexes can be linked with their equivalents in the 1981 = 100 series using the link factors which were released in the July 1990 issue and repeated in the December issue of this publication.

The index covers purchases of domestically produced and imported goods by Canadian industry, generally for further processing, and does not cover exports or flows of raw materials directly to final demand (principally foodstuffs). For example, potatoes bought by food processing manufacturers (for the manufacture of potato chips, or frozen french fries) are included in the index, but those bought by consumers directly are not.

As a purchasers' price index, prices should include all charges purchasers incur to bring a commodity to the establishment gate. Thus transportation charges, taxes net paid and custom duties are all included. So also are the effects of subsidies, if any are paid to the purchaser.

While prices are ideally collected from the purchaser, there are several cases where other well known prices are used instead: for example, marketing board prices for eggs and milk, and stockyard prices for some livestock. In a few cases, where data for unprocessed materials are not available, prices are taken for a similar commodity at the next stage of processing as occured for some non-ferrous metals. A detailed description of the characteristics of prices for any commodity is available from Prices Division on request.

### INDICES DES PRIX DES MATIÈRES BRUTES (1986 = 100)

Les indices des prix des matières brutes (IPMB) mesurent les variations des prix d'achat des matières brutes par les industries canadiennes. L'expression "matières brutes" désigne soit un produit vendu pour la première fois après son extraction de la nature, soit un produit substitut recyclé (tel les déchets de métaux). Ainsi, le blé est considéré comme une matière brute, mais non la farine de blé, le minerai de fer mais non la fonte en gueuses, le charbon mais non l'électricité. Les prix d'environ quatre-vingt produits, regroupés en sept composantes principales, sont recueillis aux fins de l'indice.

L'indice d'ensemble et les indices des composantes principales, ayant comme période de référence 1986, sont publiés mensuellement dans le Quotidien de Statistique Canada, environ cinq semaines après la fin du mois de référence. Ces indices sont également disponibles dans la matrice 2009 de CANSIM.

Ces indices constituent la suite des Indices des prix des matières brutes, 1981 = 100, précédemment publiés. Les nouvelles séries basées 1986 = 100 peuvent être raccordées à leurs séries équivalentes basées 1981 = 100 en utilisant les facteurs de raccordement. Ces derniers sont publiés dans le numéro de juillet 1990, et répétés dans le numéro de décembre de la présente publication.

L'indice couvre les achats par les industries canadiennes de biens produits au Canada et de biens importés, en vue d'une transformation subséquente. L'indice ne couvre cependant pas les exportations, ni les matières brutes qui se rendent directement à la demande finale (principalement les denrées alimentaires). Par exemple, les pommes de terre achetées par les fabricants de produits alimentaires (pour la production de croustilles ou de pommes de terre congelées) sont pris en compte dans l'indice, alors que celles directement achetées par les consommateurs ne le sont pas.

Comme il s'agit d'un indice des prix d'achat, les prix devraient comprendre tous les frais supportés par l'acheteur pour faire parvenir le produit à la porte de l'établissement. Les frais de transport, les taxes nettes payées et les droits de douane, de même que les effets de toute subvention versée à l'acheteur, sont donc incorporés aux prix.

Bien qu'idéalement, les prix sont directement recueillis auprès des acheteurs, il existe en pratique un certain nombre de cas où des prix provenant d'autres sources bien connues sont utilisés: par exemple, les prix des offices de commercialisation des oeufs et du lait, les prix des parcs à bestiaux. Dans un certain nombre de cas où les données pour les matières non transformées ne sont pas disponibles, les prix sont prélevés pour un produit semblable à l'étape suivante de transformation. Tel est le cas notamment pour certains métaux non ferreux. La Division des prix fera parvenir sur demande une description détaillée des caractéristiques des prix d'un produit donné.

Prices collected each month are those in effect on the 15th of the month or the nearest prior business day. In a few cases, prices used are averages for the week which includes the 15th. Prices are reported directly to Statistics Canada or are taken from trade publications or from publications of other government departments.

Weights were derived from the 1986 Input/Output tables which provide values at purchasers prices of commodities purchased as intermediate inputs.

Indexes for aggregates of individual raw materials are calculated according to the following formula:

Les prix recueillis chaque mois sont ceux en vigueur le 15 du mois ou le jour ouvrable qui le précède immédiatement. Dans certains cas, les prix relevés représentent la moyenne des prix de la semaine englobant le 15 du mois. Les prix sont soit déclarés directement à Statistique Canada, soit tirés de revues spécialisées ou de publications d'autres organismes gouvernementaux.

Les pondérations furent dérivées des tableaux d'entréessorties de 1986, qui fournissent les valeurs aux prix d'achat des produits acquis à titre d'entrées intermédiaires.

Les indices pour les agrégats de matières brutes individuelles sont dégagés à l'aide de la formule suivante:

dénote le mouvement de l'indice composite de prix

entre la période de référence o et la période courante

indique la sommation sur tous les éléments i faisant

$$P_{t/o}^{(agg)} = \sum_{i} \frac{w^{i}}{\sum_{w^{i}}} \cdot P_{t/o}^{i}$$

|                  | time t for the defined aggregate;  |                  | t pour l'agrégat spécifié;   |

### ELECTRIC POWER SELLING PRICE INDEXES (NON-RESIDENTIAL), 1986 = 100

Electric Power Selling Price Indexes are published on a regional and provincial basis for two broad industrial customer categories of sales; for bills less than 5000 KW and for sales of 5000 KW or more. Prices are reported by electric utilities for non-interruptible power contracts with manufacturing, service, and other Canadian industrial customers. Monthly prices are collected from all major generating and distributing utilities three times a year. The resulting indexes are released with other monthly Industry Price Indexes for April, August and December of each year. The indexes have 1986 as a time reference base and the weights used are 1986 company revenues from sales of electricity, as collected by Prices Division.

The formula used to calculate the Electric Power Selling Price Indexes is a fixed weighted index formulation, which is the same as that described for the Industrial Product Price Indexes, 1986 = 100, technical notes presented above. The indexes are available on CANSIM in matrix 2020. Indexes for the current year and the previous year are subject to revision.

These indexes are a continuation of the previously published Electricity Selling Price Indexes, 1981 = 100. The new, 1986 = 100 indexes can be linked with their equivalents in the 1981 = 100 series using the link factors which were released in the July 1990 issue and repeated in the December issue of this publication.

For further details, please contact Prices Division, Statistics Canada, Ottawa, Ontario K1A 0T6, telephone (613)951-9607 or 951-3350, facsimile (613)951-2848.

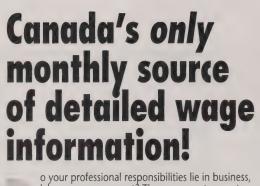

### INDICES DES PRIX DE VENTE DE L'ÉNERGIE ÉLECTRIQUE (NON RÉSIDENTIELLE), 1986 = 100

Les indices des prix de vente de l'énergie électrique sont publiés, par région et par province, pour deux grandes catégories de clients industriels, soit les factures de moins de 5000 kW et les factures de 5000 kW et plus. Les prix sont déclarés par les services publics d'électricité pour des contrats d'énergie non susceptible d'être interrompue. conclus avec des manufacturiers, des services et d'autres clients industriels canadiens. Les prix mensuels sont relevés trois fois par année auprès de tous les grands services de production et de distribution d'énergie. Les indices établis, accompagnant d'autres indices mensuels des prix de l'industrie, sont diffusés chaque année aux mois d'avril, d'août et de décembre. Les indices ont comme période de référence 1986, et les pondérations sont fondées sur les recettes au titre des ventes qu'ont touchées les entreprises en 1986, telles que recueillies par la Division des prix.

Le calcul des indices des prix de vente de l'énergie électrique se fait à l'aide d'une formule d'indice à pondération fixe, identique à celle décrite ci-dessus dans les notes techniques des Indices des prix des produits industriels, 1986 = 100. Les indices sont disponibles par l'entremise de CANSIM sur la matrice 2020. Les indices de la présente année et de l'année précédente sont sujets à révision.

Ces indices constituent la suite des indices des prix de vente de l'énergie électrique, 1981 = 100, précédemment publiés. Les nouvelles séries basées 1986 = 100 peuvent être raccordées à leurs séries équivalentes basées 1981 = 100 en utilisant les facteurs de raccordement. Ces derniers sont publiés dans le numéro de juillet 1990 et répétés dans le numéro de décembre de la présente publication.

Pour plus de renseignements, veuillez contacter la Division des prix, Statistique Canada, Ottawa, Ontario K1A 0T6, téléphone (613)951-9607 ou 951-3350, télécopieur (613)951-2848.

labour or government? Then you must come to grips with how changes in the price of labour can impact on your organization. Employment, Earnings and Hours is the journal to help you evaluate the implications of wage and salary fluctuations.

Employment, Earnings and Hours is based on data from 42,000 Canadian firms. It's the largest monthly business survey

empioi, gains et durée du travall

Employment,

Earnings and Hours

in the country. And it's the only source of weekly and hourly earnings data ín Canada. Éach issue reports on the number of payroll employees by industry, average standard work weeks, overtime payments and much more! And the data covers over 280 major industry groups! Each month,

> **Employment, Earnings** and Hours includes a succinct "Highlights" section reporting on major monthly dévelopments. And every quarter, a feature article analyses a significant labour topic that will Canada increase your knowledge

> > labour market.

of Canada's

Use Employment, Earnings and Hours to:

• safeguard your company from industry-specific cost increases or losses due to inflation when signing multi-year contracts;

- strengthen your position for negotiating wage increases and salary adjustments;
- · make your contract bids more competitive;
- pinpoint future wage and salary expenditures.

**Employment**, **Earnings and Hours** will help you track wage changes, analyse the employment situation by industry, measure the economic performance of your firm against the average for firms in similar industries and develop escalation clauses in long-term contracts.

Subscribe to **Employment**, **Earnings and Hours** (Catalogue no. 72-002) for \$285 (plus \$19.95 GST) in Canada, US\$342 in the United States and US\$399 in other countries. If you aren't completely satisfied with your subscription - for any reason - you may cancel and receive a full refund on all undelivered issues!

# L'unique source mensuelle canadienne de renseignements détaillés sur les salaires!

euvrez-vous au sein d'une entreprise, d'un syndicat ou de l'administration publique? Il vous faut alors bien saisir comment les fluctuations des salaires influent sur votre organisation.

Emploi, gains et durée du travail est la revue qui vous aidera à évaluer les conséquences des fluctuations au chapitre des salaires et des traitements.

Emploi, gains et durée du travail est établi selon des données provenant de 42 000 entreprises canadiennes. C'est la plus vaste enquête mensuelle de conjoncture au pays. Et c'est la seule source de données sur la rémunération hebdomadaire ou horaire au Canada. Chaque numéro détermine le nombre d'employés rémunérés par industrie, la semaine de travail normale moyenne, la rémunération versée pour les heures supplémentaires, et bien d'autres éléments! Ces données portent sur 280 importants groupes d'activité!

Chaque mois, Emploi, gains et durée du travail renferme une brève section intitulée «Faits saillants» résumant les principaux développements survenus au cours du mois. Et chaque trimestre, vous trouverez une analyse fouillée sur une importante question dans le domaine du travail qui vous permettra d'approfondir votre connaissance du marché du travail au Canada.

### Utilisez Emploi, gains et durée du travail pour :

- mettre votre compagnie à l'abri des augmentations de coûts relatives à votre industrie ou des pertes causées par l'inflation au moment de signer des contrats qui s'étendent sur plusieurs années;
- renforcer votre position de négociation lors d'augmentations et de rajustements de traitements et de salaires;
- rendre plus concurrentielles vos soumissions contractuelles;
- préciser vos dépenses futures au chapitre des traitements et salaires.

Emploi, gains et durée du travail vous aidera à suivre l'évolution des salaires, à analyser la situation de l'emploi par industrie, à mesurer les résultats économiques de votre entreprise par rapport à la moyenne des entreprises des branches d'activité semblables et à développer les clauses à échelle mobile prévues dans les conventions à long terme.

Abonnez-vous à Emploi, gains et durée du travail (no 72-002 au Catalogue) pour 285 \$ (plus 19,95 \$ de TPS) au Canada, 342 \$ US aux États-Unis et 399 \$ US dans les autres pays. Si pour une quelconque raison vous n'êtes pas satisfait, vous pouvez annuler votre abonnement et nous vous rembourserons dans sa totalité la portion non utilisée de l'abonnement.

Pour commander, veuillez écrire à Vente des publications, Statistique Canada, Ottawa (Ontario), K1A 0T6, ou communiquer avec le Centre régional de consultation de Statistique Canada le plus proche (voir la liste figurant dans la présente publication). Pour commander plus rapidement, composez sans frais le 1-800-267-6677 ou expédiez votre commande par télécopieur au numéro 1-613-951-1584. Veuillez ne pas envoyer de confirmation pour les commandes faites par téléphone ou télécopieur.

### MERCI DE VOTRE COMMANDE!

Statistique Canada Statistics Canada Canadä

# To those of you who need in-depth information about the labour market...

... Statistics Canada produces *Labour Force Annual Averages 1992* – a reference publication created specifically to meet those needs. With detailed data ... Quick-reference summaries and graphs ... Geographical breakdowns in unprecedented detail ... More variables and cross classifications than published in the monthly issues of *The Labour Force*.

### The Labour Force Annual Averages 1992 covers:

- an overview of employment in the major groups of the goods-producing industries over the period 1976 to 1992;
- time loss and absenteeism by industry and province;
- full-time and part-time employment by industry and province;
- occupations for Census Metropolitan Areas (CMAs) and economic regions;
- industries for CMAs and economic regions;
- labour market participation and family responsibilities by province;
- and more.

**Labour Force Annual Averages 1992.** Part and parcel of Statistics Canada's customer-driven approach to business information

**Labour Force Annual Averages 1992** (catalogue number 71-220) is available for \$39 in Canada, US\$47 in the United States and US\$55 in other countries.

To order, write Marketing Division, Publication Sales, Statistics Canada, Ottawa, Ontario, K1A 0T6. Or contact the Statistics Canada Regional Reference Centre nearest you. (A list appears in this publication.)

For faster ordering, fax your order to (613) 951-1584. Or call toll-free 1-800-267-6677 and use your VISA or MasterCard.

### À ceux d'entre vous qui désirent obtenir de l'information plus détaillée sur le marché du travail...

... Statistique Canada présente Moyennes annuelles de la population active 1992 – un document de référence créé spécialement à votre intention. Vous y trouverez des données détaillées, des sommaires et des graphiques faciles à consulter, des ventilations géographiques plus détaillées qu'auparavant et davantage de variables et de recoupements qu'il n'en paraît dans les numéros mensuels de La population active.

Moyennes annuelles de la population active 1992 porte sur:

- un aperçu de l'emploi dans les groupes majeures des branches productrices de biens au cours de la période 1976 à 1992:
- les heures perdues et l'absentéisme, ventilés par secteur d'activité et province;
- l'emploi à plein temps et à temps partiel, ventilé par secteur d'activité et province;
- les professions dans les régions métropolitaines et les régions économiques;
- les secteurs d'activité dans les régions métropolitaines et les régions économiques;
- la participation au marché du travail et les obligations familiales selon la province;
- et bien d'autres.

Moyennes annuelles de la population active 1992 est un pivot de l'approche de Statistique Canada qui vise à satisfaire les besoins de ses clients en matière d'information.

Moyennes annuelles de la population active 1992 (numéro 71-220 au catalogue) : est offert à 39 \$ au Canada, 47 \$ US aux États-Unis et 55 \$ US dans les autres pays.

Pour commander, prière d'écrire à l'adresse suivante : Division de la commercialisation, Vente des publications, Statistique Canada, Ottawa (Ontario) K1A 0T6, ou communiquer avec le centre régional de consultation de Statistique Canada le plus proche (liste des centres incluse dans la présente publication.)

Pour accélérer le service, commander par télécopieur au (613) 951-1584, ou composer sans frais le 1-800-267-6677 et utiliser la carte VISA ou MasterCard.

# THE MARKET RESEARCH HANDBOOK 1992

The fastest way to get off to a good start!

Brainstorming with your colleagues produces some great marketing ideas. But which ones will you use? The Market Research Handbook 1992 can help you narrow your options before you commit.

your options before you commit any more time and resources to developing your strategy.

This handbook is the most comprehensive statistical compendium on Canadian consumers and the businesses that serve them.

It helps you to identify, define and locate your target markets.

### Looking for...

...socio-economic and demographic profiles of 45 urban areas?

. . . revenue and expenditure data for retailers and small businesses?

The Market Research Handbook 1992 has it all... and more. It provides information on:

- personal spending
- size and composition of households
- wages and salaries
- investment in Canadian industries
- labour force in various industries
- industry and consumer prices

It has been one of our bestsellers since 1977 for the simple reason that it offers such a range and depth of market data. Save time and money when you're looking for data or data sources, keep the **Market Research Handbook 1992** close at hand for easy reference.

The **Market Research Handbook 1992** (Cat. no. 63-224) is \$94 (plus 7 % GST) in Canada, US\$113 in the United States and US\$132 in other countries.

To order, write to Publication Sales, Statistics Canada, Ottawa, Ontario, K1A 0T6 or contact the nearest Statistics Canada Reference Centre listed in this publication.

For faster service fax your order to 1-613-951-1584. Or call toll-free 1-800-267-6677 and use your VISA or MasterCard.

# LE RECUEIL STATISTIQUE DES ÉTUDES DE MARCHÉ 1992

Pour partir du bon pied!

Des séances de remue-méninges jaillissent d'excellentes idées de commercialisation. Mais lesquelles choisir ? Le **Recueil** 

statistique des études
de marché 1992 peut
vous faciliter les choix
avant que vous n'engagiez
plus de temps et de ressources

à l'élaboration de votre stratégie.

Ce recueil statistique est le plus exhaustif qui soit sur les consommateurs canadiens et les entreprises

qui les servent. Il vous aide à définir et situer vos marchés cibles.

### Vous cherchez...

...des profils socio-économiques et démographiques de 45 régions urbaines ?

...des données sur les recettes et les dépenses de détaillants et de petites entreprises ?

Le Recueil contient tout cela... et plus encore :

- dépenses personnelles
- taille et composition des ménages
- traitements et salaires
- investissements par secteur d'activité économique
- population active par secteur d'activité
- prix de l'industrie et de la consommation

Si c'est l'un de nos succès depuis 1977, c'est parce qu'il vous renseigne en long et en large sur le marché. Pour économiser temps et argent, vous ne sauriez vous en passer.

Le **Recueil statistique des études de marché 1992** (n° 63-224 au catalogue) coûte 94 \$ (TPS de 7% en sus) au Canada, 113 \$ US aux États-Unis et 132 \$ US dans les autres pays.

Pour commander, veuillez écrire à Vente des publications, Statistique Canada, Ottawa (Ontario), K1A 0T6 ou communiquer avec le Centre de consultation de Statistique Canada le plus près (voir la liste figurant dans la présente publication).

Pour un service plus rapide, commandez par télécopieur au 1-613-951-1584. Ou composez sans frais le 1-800-267-6677 et utilisez votre carte VISA ou MasterCard.

### Note of Appreciation

Canada owes the success of its statistical system to a long-standing cooperation involving Statistics Canada, the citizens of Canada, its businesses and governments. Accurate and timely statistical information could not be produced without their continued cooperation and goodwill.

### Note de reconnaissance

Le succès du système statistique du Canada repose sur un partenariat bien établi entre Statistique Canada et la population, les entreprises et les administrations canadiennes. Sans cette collaboration et cette bonne volonté, il serait impossible de produire des statistiques précises et actuelles.

### **Symbols**

The following standard symbols are used in Statistics Canada publications:

- .. figures not available.
- ... figures not appropriate or not applicable.
- nil or zero.
- -- amount too small to be expressed.
- p preliminary figures.
- r revised figures.
- x confidential to meet secrecy requirements of the Statistics Act.

### NOTE ON CANSIM

CANSIM® (Canadian Socio-Economic Information Management System) is Statistics Canada's computerized data bank and its supporting software. Most of the data appearing in this publication, as well as many other data series are available from CANSIM via terminal, on computer printouts, or in machine readable form. Historical and more timely data, not included in this publication, are available from CANSIM.

For further information write to Marketing Division, Statistics Canada, Ottawa, K1A 0T6 or call (613) 951-8200.

Registered Trade Mark of Statistics Canada.

### Revision

Unless otherwise stated, price indexes in this publication are subject to revision for the most recent six months shown. Any revisions beyond these limits are so indicated.

The paper used in this publication meets the minimum requirements of American National Standard for Information Sciences – Permanence of Paper for Printed Library Materials, ANSI Z39.48 – 1984.

### Signes conventionnels

Les signes conventionnels suivants sont employés uniformément dans les publications de Statistique Canada:

- .. nombres non disponibles.
- ... n'ayant pas lieu de figurer.
- néant ou zéro.
- -- nombres infimes.
- p nombres provisoires.
- r nombres rectifiés.
- x confidentiel en vertu des dispositions de la Loi sur la statistique relatives au secret.

### NOTE CONCERNANT CANSIM

Le CANSIM® (Système canadien d'information socio-économique) est le système de Statistique Canada qui se compose d'une banque de données informatisées et de son logiciel de soutien. La plupart des données présentées dans cette publication et beaucoup d'autres données contenues dans le CANSIM peuvent être extraites par l'intermédiaire d'un terminal, sous forme d'imprimés d'ordinateur ou sous forme lisible par machine. Des données historiques et des données plus actuelles qui n'apparaissent pas dans cette publication sont disponibles de CANSIM.

Pour plus de renseignements, écrivez à la Division de la commercialisation, Statistique Canada, Ottawa, K1A 0T6 ou téléphonez à (613) 951-8200.

Marque déposée de Statistique Canada.

### Révisions

Sauf avis contraire, les indices de prix contenus dans la présente publication sont susceptibles d'être révisés pour les six derniers mois indiqués. Toute révision portant sur une plus longue période est indiquée.

Le papier utilisé dans la présente publication répond aux exigences minimales de l'"American National Standard for Information Sciences" – "Permanence of Paper for Printed Library Materials", ANSI Z39.48 – 1984.

This publication was prepared under the direction of:

- Michel Jacod, Director, Prices Division
- Robin Lowe, Chief, Goods & Services Producing Industries Section

### **Highlights**

### **Industrial Product Price Index**

According to preliminary figures, the Industrial Product Price Index (IPPI, 1986 = 100) rose 0.1% to 112.1 in March 1993 from February's revised level of 112.0. Nine of the 21 major groups of products registered increases in their indices while seven decreased and five did not change. There was a noticeable increase of 2.9% in the lumber, sawmill and other wood products price index, which was offset by declines in the petroleum and coal products price index (-1.7%), the primary metal products price index (-0.9%), and the automobiles, trucks and other transport equipment price index (-0.3%).

During March, the value of the US dollar fell 0.6% against the Canadian dollar, reducing the value of export prices denominated in American dollars. This particularly affected the index for automobiles, trucks, and other transport equipment. In March 1993, the American dollar was 4.0% higher against the Canadian dollar than in March 1992.

Compared to March 1992, the IPPI was 3.6% higher. This was the same year-to-year change as in February. The most important price increases over the last twelve months were in lumber, sawmill and other wood products (32.6%) and autos, trucks, and other transport equipment (4.2%). There were also increases of over 4% in petroleum and coal products (6.8%), tobacco and tobacco products (5.5%), and meat, fish, and dairy products (4.4%). Three declines occurred; the largest being in primary metal products (-2.0%). The two other declines were less than 0.5%. Excluding petroleum and coal products, the 12-month change for the index was 3.4%.

The first stage intermediate goods price index recorded a 1.1% decline from February, but the second stage intermediate goods index rose 0.4%. The finished foods and feeds index did record a 0.2% increase over February, but the capital equipment and the all other finished goods price indices recorded respectively 0.2% and 0.3% declines from February's levels. Four of these indices were higher than a year earlier, ranging from finished foods and feeds at 2.2% to second stage intermediate goods at 5.5%. First stage intermediate goods, however, declined by 0.8% from March 1992. The period of increasing year-to-year price changes for the finished goods price index, and generally also for its three component indices (foods and feeds, capital equipment, and other finished goods), which had begun in January 1992, came to an end in January 1993. The year-to-year change for all four of these indices declined in February and, for three of the four indices, also declined in March, while the foods and feeds index remained unchanged.

The lumber, sawmill and other wood products price index increased for the fifth consecutive month in March, rising by 2.9%, and was 32.6% higher than in March 1992. Strong price increases for softwood lumber continued in Quebec and the Prairies, but increases were much smaller in Ontario and the Atlantic provinces, and smallest in British Colombia, with prices barely rising at all in the interior of that province.

### Faits saillants

### Indice des prix des produits industriels

D'après les chiffres provisoires de mars 1993, l'indice des prix des produits industriels (IPPI, 1986 = 100) s'est établi à 112.1, en hausse de 0.1% par rapport au niveau révisé de février (112.0). Neuf des 21 principaux groupes de produits ont affiché une progression de leur indice, sept ont diminué et cinq sont restés inchangés. L'indice des sciages, produits de scierie et divers a connu une augmentation appréciable (2.9%), qui a été compensée par les baisses observées pour les produits du pétrole et du charbon (-1.7%), les produits métalliques primaires (-0.9%) et les voitures, camions et autre matériel de transport (-0.3%).

En mars 1993, le dollar américain s'est déprécié de 0.6% par rapport au dollar canadien, ce qui a réduit la valeur des prix des exportations libellées en dollar américain. Cette dépréciation a touché en particulier l'indice des voitures, camions et autre matériel de transport. En mars 1993, l'appréciation de la devise américaine par rapport à la devise canadienne était de 4.0% de plus qu'en mars 1992.

L'IPPI dépassait de 3.6% son niveau de mars 1992. Cette variation d'une année à l'autre était la même qu'en février. Les hausses de prix les plus fortes au cours des douze derniers mois ont été observées pour les sciages, produits de scierie et divers (32.6%) et les voitures, camions et autre matériel de transport (4.2%). Des hausses supérieures à 4% ont aussi été observées pour les produits du pétrole et du charbon (6.8%), le tabac et les produits du tabac (5.5%) et la viande, le poisson et les produits laitiers (4.4%). On a constaté trois diminutions, la plus forte étant celle des produits métalliques primaires (-2.0%). Les deux autres étaient inférieures à 0.5%. Si l'on exclut les produits du pétrole et du charbon, la variation sur douze mois de l'indice a été de 3.4%

L'indice des produits semi-finis de première étape a régressé de 1.1% par rapport à février, mais celui des produits semi-finis de deuxième étape s'est accru de 0.4%. L'indice des aliments de consommation et des aliments pour animaux a augmenté de 0.2% par rapport à février, mais celui du matériel capitalisé a reculé de 0.2% et celui des autres produits finis de 0.3% par rapport au mois précédent. Quatre de ces indices étaient supérieurs à leur niveau d'un an plus tôt, les augmentations étant comprises entre 2.2% pour les aliments de consommation et les aliments pour animaux et 5.5% pour les produits semi-finis de deuxième étape. Les produits semi-finis de première étape ont fléchi de 0.8% par rapport à mars 1992. La période d'augmentation des différences de prix d'une année à l'autre pour les produits finis et, généralement, aussi pour ces trois éléments (les indices des prix des aliments de consommation et des aliments pour animaux, du matériel capitalisé et des autres produits finis), qui avait commencé en janvier 1992, s'est terminée en janvier 1993. En effet, la variation à la hausse annuelle pour ces quatre indices était plus faible en février, et en mars, la variation de trois des quatre indices était en baisse tandis que l'indice des aliments de consommation et des aliments pour animaux est resté inchangé.

L'indice des sciages, produits de scierie et divers a augmenté en mars pour la cinquième fois de suite (2.9%) et a dépassé ainsi de 32.6% son niveau de mars 1992. Le prix du bois de construction de résineux a continué d'augmenter fortement au Québec et dans les Prairies, mais les hausses étaient bien moindres en Ontario et dans les provinces de l'Atlantique, et elles étaient les moins élevées en Colombie-Britannique, où les prix ont à peine progressé dans l'intérieur de cette province.

The automobiles, trucks and other transportation equipment price index fell 0.3% in March as the value of the US dollar fell, despite a 0.1% increase in the domestic automobile price index and no change in the domestic truck price index. Overall, the autos, trucks, and other transportation equipment index was 4.2% higher than a year ago. Contributing to this was the effect of the change in the valuation of the Canadian dollar on the price of exports as well as a 7.4% increase in the price of domestic trucks. The prices of domestic automobiles declined by 0.2% in the same time period.

The petroleum and coal products price index was down by 1.7% in March but stood 6.8% higher than a year ago. These movements are primarily the result of world crude oil price movements.

The primary metal products price index was down by 0.9% from February 1993 and by 2.0% from March 1992. Most non-ferrous metals, except magnesium, declined in March. The aluminum products and nickel products price indices showed similar declines, 1.2% and 1.3% respectively. The indices for copper and copper alloy products and for non-ferrous metals were down more, falling 3.1% and 2.3% respectively. Increased exports from the former U.S.S.R have acted to depress a number of non-ferrous metal prices for some time and continued to do so in March. The decline in the primary metal products price index between March 1992 and March 1993 was primarily due to a 16.4% fall in nickel product prices and a 6.0% decline in the index for other non-ferrous metals. During the last year, the index for iron and steel products has shown little movement. In March 1993 it was up 0.1% from February 1993 and was down 0.1% from March 1992.

L'indice des voitures, camions et autre matériel de transport s'est replié de 0.3% en mars, compte tenu de la dépréciation du dollar américain et malgré une augmentation de 0.1% de l'indice des prix domestiques des automobiles et l'absence de variation de l'indice des prix domestiques des camions. Dans l'ensemble, l'indice des voitures, camions et autre matériel de transport a dépassé de 4.2% son niveau d'un an plus tôt. Cette hausse est due à l'effet du changement de l'évaluation du dollar canadien sur le prix des exportations et à une majoration de 7.4% des prix domestiques des camions. Les prix domestiques des automobiles ont diminué de 0.2% pendant la même période.

L'indice des produits du pétrole et du charbon a reculé de 1.7% en mars, mais dépassait de 6.8% son niveau d'un an plus tôt. Ces mouvements sont attribuables principalement aux fluctuations des prix du pétrole brut sur le marché mondial.

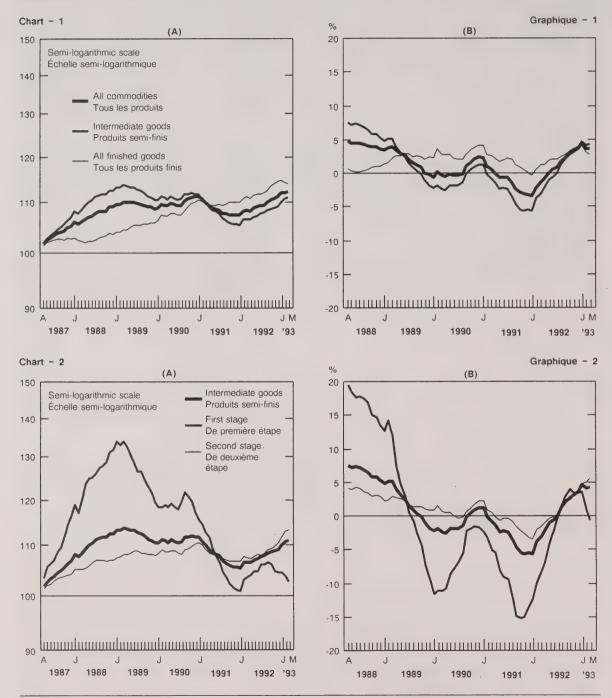

L'indice des produits métalliques primaires a baissé de 0.9% par rapport à février 1993 et de 2.0% par rapport à mars 1992. La plupart des prix des métaux non ferreux, sauf le magnésium, ont reculé en mars. Les indices des produits de l'aluminium et des produits du nickel ont affiché des baisses similaires, soit 1.2% et 1.3% respectivement. Les indices des produits du cuivre et d'alliage du cuivre et des métaux non ferreux ont encore enregistré des baisses, soit 3.1% et 2.3% respectivement. La hausse des exportations en provenance de l'ex-URSS a fait tomber les prix d'un certain nombre de métaux non ferreux pendant quelque temps et a continué dans ce sens en mars. Le repli de l'indice des produits primaires entre mars 1992 et mars 1993 était surtout attribuable à une chute de 16.4% de l'indice des produits du nickel et à une baisse de 6.0% de l'indice des autres métaux non ferreux. Pendant l'année écoulée, l'indice des produits du fer et de l'acier a affiché peu de variation. En mars 1993, il a monté de 0.1% par rapport à février 1993 et baissé de 0.1% par rapport à mars 1992.

# **Highlights**

#### Raw Materials Price Index

Based on preliminary data, the Raw Materials Price Index (RMPI, 1986 = 100) for March 1993 reached a level of 112.0, up 1.2% from the previous month. Three of the seven major component indexes were higher in March, with wood reporting the largest increase (7.4%). The overall upward trend was moderated by decreases in the indexes for non-ferrous metals (-2.4%) and mineral fuels (-0.4%). The RMPI excluding mineral fuels for March 1993 was reported up 1.9%.

The March 1993 RMPI was 10.9% higher than its March 1992 level, owing mainly to increases in the indexes for wood (32.5%), mineral fuels (11.5%), and animal and animal products (6.3%). The 1.3% drop in the non-ferrous metals index slightly offset these upward influences. The RMPI excluding mineral fuels rose 10.7% from March 1992 to March 1993

The wood index posted a 7.4% increase in March 1993 as a result of the 9.6% rise in its major component, the log and bolt index, which has been rising continuously since December 1991. Compared with the March 1992 level, the wood index was up 32.5% on the strength of the 45.2% increase in the log and bolt index.

The vegetable products index was 0.6% higher in March 1993, reflecting higher prices for unrefined sugar (11.8%), raw tobacco (3.1%), and soybeans (4.2%). These increases were partially offset by decreases in the indexes for barley (-8.1%) and wheat (-1.9%). The vegetable products index was up 3.5% from the March 1992 level due to rising indexes for oilseeds (14.7%), unrefined sugar (22.1%) and raw tobacco (9.7%). The 1.7% decrease in the grains index was a moderating factor.

The mineral fuels index was down 0.4% in March 1993 owing to identical 0.4% decreases in its two main components, the crude mineral oils and coal indexes. The natural gas index was unchanged following six consecutive monthly increases. The mineral fuels index was up 11.5% from the March 1992 level due to the 12.2% rise in the crude mineral oils index.

The non-ferrous metals index dropped 2.4% in March 1993, reflecting lower prices for copper concentrates (-3.2%), zinc concentrates (-5.5%) and aluminum materials (-1.8%). Since March 1992 the non-ferrous metals index fell 1.3% owing mainly to lower indexes for zinc concentrates (-13.1%), nickel concentrates (-17.4%) and aluminum materials (-2.8%). Radioactive concentrates were an offsetting factor, increasing 23.9%.

## Faits saillants

#### Indice des prix des matières brutes

D'après les chiffres préliminaires, l'indice des prix des matières brutes (IPMB, 1986 = 100) a atteint 112.0 en mars 1993, soit une augmentation de 1.2% par rapport au mois précédent. Trois des sept indices majeurs ont enregistré des hausses, la plus importante étant celle du bois (7.4%). L'effet à la hausse a été atténué par des baisses dans les indices des métaux non ferreux (-2.4%) et des combustibles minéraux (-0.4%). L'augmentation de l'IPMB sans la composante des combustibles minéraux a été de 1.9% au cours du mois de mars 1993.

Par rapport au mois de mars 1992, l'IPMB a progressé de 10.9%, principalement en raison des augmentations des indices du bois (32.5%), des combustibles minéraux (11.5%) et des animaux et substances animales (6.3%). L'effet à la hausse a été partiellement atténué par une diminution de 1.3% de l'indice des métaux non ferreux. De mars 1992 à mars 1993, l'IPMB sans la composante des combustibles minéraux a augmenté de 10.7%.

L'indice du bois a progressé de 7.4% en mars 1993, en raison de l'augmentation de 9.6% de sa principale composante, l'indice des billes et billots, qui poursuit sa croissance entreprise en décembre 1991. Par rapport à mars 1992, l'indice du bois a augmenté de 32.5%, en raison de la hausse de 45.2% de l'indice des billes et billots.

L'indice des substances végétales a augmenté de 0.6% en mars 1993, à cause de l'augmentation des indices du sucre non raffiné (11.8%), du tabac en feuilles (3.1%), et du soja (4.2%). Ces augmentations ont été partiellement contrebalancées par la baisse des indices de l'orge non moulu (-8.1%), et du blé non moulu (-1.9%). Par rapport à mars 1992, l'indice des substances végétales a augmenté de 3.5%, en raison de la hausse des indices des oléagineux (14.7%), du sucre non raffiné (22.1%), et du tabac en feuilles (9.7%). Cependant, la croissance de l'indice fut atténuée par la diminution de l'indice des céréales de 1.7%.

L'indice des combustibles minéraux a diminué de 0.4% en mars 1993, suite à des baisses de 0.4% de ses deux principales composantes, les indices des huiles minérales brutes et du charbon. Quant à l'indice du gaz naturel, il est demeuré au même niveau après six mois consécutifs de croissance. L'indice des combustibles minéraux a augmenté de 11.5% depuis mars 1992, en raison de la hausse de 12.2% de l'indice des huiles minérales brutes.

Quant à l'indice des métaux non ferreux, il a enregistré une baisse de 2.4% en mars 1993 suite à la diminution des indices des concentrés de cuivre (-3.2%), des matériaux d'aluminium (-1.8%), et des concentrés de zinc (-5.5%). Au cours des douze derniers mois, l'indice des métaux non ferreux a diminué de 1.3%, principalement à cause de la baisse des indices des concentrés de zinc (-13.1%), de nickel (-17.4%), et des matériaux d'aluminium (-2.8%). Ces baisses ont été atténuées par une hausse de 23.9% de l'indice des concentrés radio-actifs.

Indexes for the most recent six months shown are subject to revision. Note:

This shows the amount by which the movement of each index would move the total in the absence of any change in the other indexes.

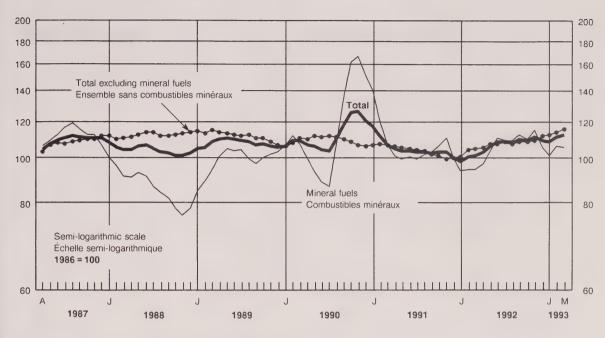

Ce chiffre donne l'ampleur de la variation qu'occasionnerait dans l'indice d'ensemble un mouvement d'un indice donné si tous les autres indices demeuraient

inchangés. These indexes are preliminary.

Ces indices sont provisoires

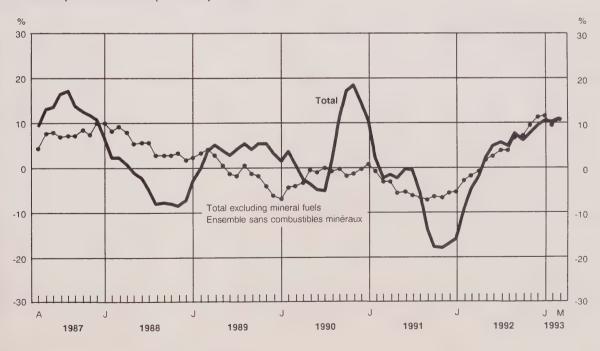

Nota: Les indices figurant pour les six mois les plus récents sont sujets à révision.

These indexes are preliminary
Ces indices sont provisoires.
Revised.
Revised.
Revised.
The aggregation of indexes by commodities or by industries should produce the same grand total. When these totals occasionally differ due to rounding, the All
Commodities index shall be regarded as authoritative, and the All Manufacturing Industries is adjusted to match.
L'agrégation des indices par produits ou par industries devrait résulter en un même grand total. Lorsque ces totaux différent occasionnellement en raison de
l'arrondissement, l'Indice total – Tous les produits devra être considéré comme celui qui fait autorité, et l'Indice total – Toutes les industries manufacturières sera
posé égal. (3)

TABLE 2. Industrial Product Price Indexes, by Commodity and Commodity Aggregations

TABLEAU 2. Indices des prix des produits industriels, par produits et agrégations de produits

1986 = 100

Indexes for the most recent six months shown are subject to revision.

The bottom line in each series title block may contain, in order from left to right, the following: the CANSIM Databank code number (d nnnnn), a numeric descriptor, a coverage measure, and a variability measure. The numeric descriptor is of the order ss-mm-nn-pppp-rr where ss indicates the M-level commodity code (from \$1 \circ 8) mm indicates the M-level commodity code (from \$1 \circ 8) mm indicates the M-level commodity code (from \$1 \circ 8) mm indicates the M-level commodity code (from \$1 \circ 8) mm indicates as special aggregation or \$9\$, which indicates as special aggregation or \$9\$, which indicates as special aggregation or \$9\$, which indicates as special aggregation which include several PCGs).

For a composite index the percentage of the coverage which is estimated from direct surveys (E+\$) is given, occasionally these coverage measures are rounded to the nearest 5% to preserve confidentiality. The variability measure is given for some indexes to indicate the relative stability of the index estimate due to sampling. The most stable indexes are marked A, the least stable, D. For further information order Industrial Product Price indexes \$100, Concepts and Methods (Catalogue 62-556).

En lisant de gauche à droite, la ligne en-dessous de chaque titre des séries présente, en tout ou en partie, l'information suivante: le numéro de code "Databank" de produits (de \$9 \circ 28) mm indique le code du niveau M des produits (de \$9 \circ 28) mm indique le code du niveau M des produits (de \$14 \circ 4), 45 \circ 69) mm indique le code du niveau M des produits (de \$14 \circ 4), 45 \circ 69) mm indique le code du niveau M des produits (de \$14 \circ 4), 45 \circ 69) mm indique le code du niveau M des produits, ou prend la valeur de \$1 pour les agrégats spéciaux, ou de \$9\$ pour les indices particuliers, pppp indique le code GPP (sail pour certains agregats spéciaux qui comprenent plusieurs GPP)

In mesure du degré de couverture pour les indices élém

Note: Indexes for the most recent six months shown are subject to revision.

Nota: Les indices figurant pour les six mois les plus récents sont sujets à révision.

(1) The aggregation of indexes by commodities or by industries should produce the same grand total. When these totals occasionally differ due to rounding, the All Commodities Index shall be regarded as authoritative, and the All Manufacturing Industries is adjusted to match.

(1) L'agrégation des indices par produits ou par industries devraient résulter en un même grand total. Lorsque ces totaux différent occasionnellement en raison de l'arrondissement, l'indice total - tous les produits devra être considéré comme celui qui fait autorité, et l'indice total - toutes les industries manufacturières sera

l'arrondissement, l'indice total - tous les produits derire considere comme control posé égal.

The numeric code to the right of the CANSIM databank number on the last line of each series is the 1980 Standard Industrial Classification (SIC) code. An explanation of the percentage figures (coverage measure) shown to the right of the SIC can be found at the end of Table 2. These coverage measures are rounded to the nearest 5% to preserve confidentiality.

Le code numérique à la droite du numéro Databank de CANSIM apparaissant à la ligne du bas de chaque série est le code de la Classification type des industries (CTI) de 1980. Une explication des données en pourcentage (mesure de degré de couverture) apparaissant à la droite du code CTI est disponible à la fin du tableau 2. Ces mesures de degré de couverture sont arrondies au 5% le plus près afin de préserver la confidentialité.

Monthly prices are collected and processed three times per annum.
Des prix mensuels sont relevés et calculés trois fois par année.
Indexes for the current year and previous year are subject to revision.
Les indices pour l'année courante et pour l'année précedente sont sujets à révision.

#### TABLEAU 6. Indices des prix des matières brutes

1986 = 100

## EXPLANATION OF METHODS USED AND ADDITIONAL SOURCES FOR INDUSTRIAL PRICE INDEXES

#### Industrial Product Price Indexes, 1986 = 100

The Industrial Product Price Indexes (IPPI) measure price changes for major commodities sold by Canadian manufacturers. Elemental indexes are calculated for 1314 Principal Commodity Group (PCG) outputs as defined in the 1986 Input/Output (I/O) table. Weights used to aggregate commodity indexes are taken from the output or "Make" matrix of the I/O system which provides an integrated set of commodity values for all manufacturing industries.

Directly surveyed commodities are supported by formal sampling procedures and a quality rating is presented for commodities and aggregations of commodities. Such indexes are derived from prices reported for the 15th of the month or the nearest prior business day for comparable transactions.

Selected indexes are published about five weeks after the reference month in the *Daily Bulletin* (Catalogue 11-001) following a pre-announced schedule of release dates. Simultaneously, all series are available from CANSIM or on request. Catalogue 62-011, *Industry Price Indexes*, is released about four weeks after the Daily Bulletin release. Each series is identified with a CANSIM D number and with a commodity (PCG) or industry (SIC) identifier. Each release of numbers is subject to revision for six months, i.e., when a July index is released, the index for the preceding January becomes final. Exceptions to this rule are announced.

#### Price Surveys

About 10,000 prices are collected monthly from about 3,500 producers for goods sold, which are valued at the boundary of the establishment, wherein the cost of taxes collected at that point and transportation provided by public carriers beyond that point are excluded. Prices are reported for finely specified transactions wherein both the good and terms of sale are identified. Such collections are instituted for important commodities. Expansions are made to the samples where price movement has a regional dimension or where there are important flows of goods to export markets.

Sampling for any directly surveyed elemental index is usually done by a formal probability sampling procedure, wherein important producers are "must take" respondents and a random selection is taken from the smaller producers. Such samples are redrawn on a regular cycle as dictated by changes in

## EXPLICATION DES MÉTHODES UTILISÉES ET SOURCES SUPPLÉMENTAIRES DES INDICES DES PRIX INDUSTRIELS

#### Indices des prix des produits industriels, 1986 = 100

Les indices des prix des produits industriels (IPPI) mesurent les variations des prix des principaux produits vendus par les fabricants canadiens. Les indices élémentaires sont calculés pour 1314 groupes principaux des produits (GPP) tels que définis dans les tableaux d'entrées-sorties de 1986. Les poids servant à agréger les indices des produits proviennent de la matrice des sorties ou de "production" des tableaux d'entrées-sorties. Cette matrice présente un ensemble intégré de valeurs pour les produits à l'intérieur de l'ensemble des industries manufacturières.

Les produits faisant directement l'objet d'un sondage sont basés sur des procédures d'échantillonnage formelles, et une cote de qualité est présentée pour les produits et les agrégats de produits. Ces indices sont calculés à partir des prix déclarés pour le 15 du mois, ou le jour ouvrable précédent le plus proche pour des transactions comparables.

Un certain nombre d'indices sont publiés environ cinq semaines après la fin du mois de référence dans le Quotidien (n° 11-001F au catalogue), selon un calendrier de publication préalablement établi. Simultanément, toutes les séries sont disponibles dans CANSIM ou sur demande. La publication n° 62-011 au catalogue, *Indices des prix de l'industrie*, paraît quatre semaines environ après le communiqué dans le *Quotidien.* Chaque série est identifiée par un numéro D de CANSIM et par un identificateur de produits (GPP) ou de branche d'activité (CTI). Les chiffres publiés pour les six derniers mois sont sujets à révision. Ainsi, lorsque l'indice de juillet est publié, l'indice pour le mois de janvier précédent devient final. Les exceptions à cette règle sont signalées.

#### Enquêtes des prix

Environ 10,000 prix sont recueillis chaque mois auprès d'environ 3,500 producteurs pour des biens vendus qui sont évalués à la limite de l'établissement, de sorte que les taxes prélevées à ce point et le coût du transport fourni par les transporteurs communs au-delà de ce point sont exclus. Les prix sont relevés pour des transactions à un niveau très détaillé, qui permet d'identifier le bien et les conditions de vente. De tels relevés sont institués pour les produits importants. Des élargissements sont apportés aux échantillons pour lesquels le mouvement des prix a une dimension régionale, ou pour lesquels il existe un important marché pour l'exportation.

L'échantillonnage pour tout indice élémentaire faisant directement l'objet d'un sondage se fait habituellement par une méthode d'échantillonnage probabiliste, selon laquelle les producteurs importants sont des répondants "obligatoires", tandis que l'on procède à une sélection aléatoire des producteurs moins importants. Ces échantillons

the market. A given elemental index is usually supported by 12 to 15 price quotes, although some are derived from as few as 8 quotes or as many as 30 quotes.

About 700 of the 1314 PCGs in the manufacturing sector are accommodated by direct survey and these account for about 85% of the value of manufacturing output in 1986. The price movement for the remaining 600 PCGs is estimated indirectly from either directly priced PCGs or through borrowing price movement from other price series.

#### Weight Base

Commodity and industry weights are taken from the "Make" matrix of the 1986 Input/Output table which, in turn, is derived from 1986 values reported for the Census of Manufacturers and edited to conform to the 1980 Standard Industrial Classification. Within-commodity weights can change in December of each year to reflect major changes in production patterns.

#### Formula

1200)

Chained series of fixed weighted price indexes are calculated by a linking procedure whereby more recent varieties and changes to establishments are introduced systematically, as required, in December of each year. Weights from the commodity level through higher levels of aggregation are held constant.

The general formula used for the main aggregations describes the price movement of a specified group of commodities where w<sup>i</sup> are the values of the output of each commodity:

sont reconstruits régulièrement, suivant l'évolution du marché. Un indice élémentaire donné repose habituellement sur 12 à 15 prix, bien que certains peuvent utiliser aussi peu que 8 prix, ou jusqu'à 30 prix.

Environ 700 des 1314 GPP du secteur de la fabrication font l'objet d'une enquête directe, qui couvrent environ 85% de la valeur de la production manufacturière en 1986. Le mouvement des prix des 600 GPP restants est estimé indirectement à partir de GPP faisant directement l'objet d'un sondage, ou en empruntant le mouvement des prix d'autres séries de prix.

#### Sources des poids

Les poids des produits et des branches d'activités proviennent de la matrice "production" du tableau d'entrées-sorties de 1986, laquelle à son tour est établie à partir des valeurs de 1986 déclarées pour le recensement des manufactures, et rectifiées afin d'être conforme à la Classification type des industries de 1980. Les poids internes des produits peuvent changer en décembre de chaque année afin d'appréhender les changements importants dans les schémas de la production.

#### **Formule**

Les séries en chaîne des indices de prix à pondération fixe sont calculées par une méthode de raccordement suivant laquelle les plus récentes variétés et les changements au niveau de l'univers des entreprises sont incorporés systématiquement, selon les besoins, en décembre de chaque année. Toutefois, les pondérations du niveau des produits jusqu'aux niveaux plus élevés d'agrégation sont maintenues constantes.

La formule générale servant au calcul des agrégations principales décrit les mouvements de prix d'un groupe donné de produits, dans laquelle w<sup>i</sup> sont les valeurs de la production de chaque produit:

$$P_{t/o}^{(agg)} = \sum_{i} \frac{w^{i}}{\sum_{w^{i}}} \cdot P_{t/o}^{i}$$

| P <sub>t/o</sub> | denotes the composite price index<br>movement between the base period o and<br>time t for the defined aggregate; | P <sub>t/o</sub> | dénote le mouvement de l'indice composite de prix<br>entre la période de référence o et la période t pour<br>l'agrégat défini; |
|------------------|--|------------------|--|
| wi               | is the transaction value of the element i in the base period;  | wi               | est la valeur de transaction de l'élément i au cours de la période de référence;   |
| P <sub>t/o</sub> | is the price index for element i, meaning its price change from the base period to time t;                       | P <sub>t/o</sub> | est l'indice de prix de l'élément i, désignant sa<br>variation de prix entre la période de référence et la<br>période t;       |
| $\sum_{i}$       | indicates summation over all elements i in   | $\sum_{i}$       | signifie la sommation de tous les éléments i dans  |

(ann)

l'agrégat défini.

the defined aggregate.

#### **Historical Data**

Historical series on the 1986 base for the Industry Price Indexes are available on CANSIM. The historical series are computed for the industry indexes classified under the 1980 Standard Industrial Classification (SIC) and for commodity indexes classified under the Principal Commodity Groups (PCG) classification. The historical series were obtained by linking together movements from the 1986-based Industrial Product Price Indexes (IPPI) series and the corresponding 1981-based Industrial Product Price Indexes (IPPI) series, using the year 1986 as the linking period. An explanatory note on the methods used to compute the historical series, as well as a set of concordance tables between both set of IPPI series are available to the public.

#### **Reference Documents**

62-558 Industry Price Indexes, 1986 = 100: users' guide, \$40.00.

This publication describes briefly the economic content of the series and presents a short description of different aggregations produced. In the tables the weighting patterns for both commodities and commodity groupings are shown. Descriptions of the characteristics of the elemental indexes are provided. Comments on index use are also provided.

62-556 Industrial Product Price Indexes, 1981 = 100, Concepts and Methods, \$25.00.

This publication describes the economic content of the series within the framework of the system of national accounts and describes how this affects price index methodology. Sampling and pricing methods are described, as are index calculation and aggregation procedures.

A glossary of terms is also provided.

For further details, please contact Prices Division, Statistics Canada, Ottawa, Ontario K1A 0T6, telephone (613)951-9607 or 951-3350, facsimile (613)951-2848.

#### Données historiques

Les séries historiques sur la base 1986 pour les Indices des prix de l'industrie sont disponibles sur CANSIM. Les séries historiques sont calculées pour les indices des industries suivant la Classification type des industries (CTI) de 1980 et pour des indices des produits suivant la classification des Groupes principaux des produits (GPP). Les séries historiques furent obtenues en raccordant ensemble les mouvements des séries des indices des prix des produits industriels (IPPI) basées sur 1986 et des séries correspondantes des indices des prix des produits industriels (IPPI) basées sur 1986 ayant servi de période de raccordement. Une note explicative sur les méthodes utilisées pour calculer les séries historiques de même qu'un ensemble de tableaux montrant les concordances entre les deux ensembles de séries IPPI sont disponibles au public.

#### Documents de référence

62-558 Indices des prix de l'industrie, 1986 = 100: guide aux utilisateurs, 40,00 \$.

Cette publication précise sommairement le contenu économique des séries dans un cadre général, de même qu'une brève description des différentes structures d'agrégation. Les tableaux contiennent les schémas de pondération à la fois pour les produits et les agrégats de produits. Y figurent également une description des caractéristiques des indices élémentaires. La publication contient des commentaires sur l'utilisation des indices.

62-556 Indices des prix des produits industriels, 1981 = 100, Concepts et méthodes, 25,00 \$.

Cette publication précise le contenu économique des séries dans le cadre général du système des comptes nationaux, et son impact sur la méthodologie des indices de prix. Elle contient une description des méthodes d'échantillonnage et d'observation des prix, de même que des méthodes de calcul et d'agrégation des indices.

La publication contient également un glossaire.

Pour plus de renseignements, veuillez contacter la Division des prix, Statistique Canada, Ottawa, Ontario K1A 0T6, téléphone (613)951-9607 ou 951-3350, télécopieur (613)951-2848.

#### RAW MATERIALS PRICE INDEXES (1986 = 100)

The Raw Materials Price Indexes (RMPI) measure price changes for the purchase of raw materials by Canadian industry. The term "raw material" refers either to a commodity that is sold for the first time after being extracted from nature, or a substitutable recycled product (e.g. metal scrap). For example wheat is considered as a raw material, but wheat flour is not, iron ore is but not pig iron, coal but not electricity. Approximately eighty commodities are priced in the index, grouped into seven major components.

The index and the major group indexes, on a 1986 time base, are published monthly in the Daily Bulletin approximately five weeks after the end of the reference month. They are also available at that time on CANSIM in matrix 2009.

These indexes are a continuation of the previously published Raw Materials Price Indexes, 1981 = 100. The new, 1986 = 100 indexes can be linked with their equivalents in the 1981 = 100 series using the link factors which were released in the July 1990 issue and repeated in the December issue of this publication.

The index covers purchases of domestically produced and imported goods by Canadian industry, generally for further processing, and does not cover exports or flows of raw materials directly to final demand (principally foodstuffs). For example, potatoes bought by food processing manufacturers (for the manufacture of potato chips, or frozen french fries) are included in the index, but those bought by consumers directly are not.

As a purchasers' price index, prices should include all charges purchasers incur to bring a commodity to the establishment gate. Thus transportation charges, taxes net paid and custom duties are all included. So also are the effects of subsidies, if any are paid to the purchaser.

While prices are ideally collected from the purchaser, there are several cases where other well known prices are used instead: for example, marketing board prices for eggs and milk, and stockyard prices for some livestock. In a few cases, where data for unprocessed materials are not available, prices are taken for a similar commodity at the next stage of processing as occured for some non-ferrous metals. A detailed description of the characteristics of prices for any commodity is available from Prices Division on request.

#### INDICES DES PRIX DES MATIÈRES BRUTES (1986 = 100)

Les indices des prix des matières brutes (IPMB) mesurent les variations des prix d'achat des matières brutes par les industries canadiennes. L'expression "matières brutes" désigne soit un produit vendu pour la première fois après son extraction de la nature, soit un produit substitut recyclé (tel les déchets de métaux). Ainsi, le blé est considéré comme une matière brute, mais non la farine de blé, le minerai de fer mais non la fonte en gueuses, le charbon mais non l'électricité. Les prix d'environ quatre-vingt produits, regroupés en sept composantes principales, sont recueillis aux fins de l'indice.

L'indice d'ensemble et les indices des composantes principales, ayant comme période de référence 1986, sont publiés mensuellement dans le Quotidien de Statistique Canada, environ cinq semaines après la fin du mois de référence. Ces indices sont également disponibles dans la matrice 2009 de CANSIM.

Ces indices constituent la suite des Indices des prix des matières brutes, 1981 = 100, précédemment publiés. Les nouvelles séries basées 1986 = 100 peuvent être raccordées à leurs séries équivalentes basées 1981 = 100 en utilisant les facteurs de raccordement. Ces derniers sont publiés dans le numéro de juillet 1990, et répétés dans le numéro de décembre de la présente publication.

L'indice couvre les achats par les industries canadiennes de biens produits au Canada et de biens importés, en vue d'une transformation subséquente. L'indice ne couvre cependant pas les exportations, ni les matières brutes qui se rendent directement à la demande finale (principalement les denrées alimentaires). Par exemple, les pommes de terre achetées par les fabricants de produits alimentaires (pour la production de croustilles ou de pommes de terre congelées) sont pris en compte dans l'indice, alors que celles directement achetées par les consommateurs ne le sont pas.

Comme il s'agit d'un indice des prix d'achat, les prix devraient comprendre tous les frais supportés par l'acheteur pour faire parvenir le produit à la porte de l'établissement. Les frais de transport, les taxes nettes payées et les droits de douane, de même que les effets de toute subvention versée à l'acheteur, sont donc incorporés aux prix.

Bien qu'idéalement, les prix sont directement recueillis auprès des acheteurs, il existe en pratique un certain nombre de cas où des prix provenant d'autres sources bien connues sont utilisés: par exemple, les prix des offices de commercialisation des oeufs et du lait, les prix des parcs à bestiaux. Dans un certain nombre de cas où les données pour les matières non transformées ne sont pas disponibles, les prix sont prélevés pour un produit semblable à l'étape suivante de transformation. Tel est le cas notamment pour certains métaux non ferreux. La Division des prix fera parvenir sur demande une description détaillée des caractéristiques des prix d'un produit donné.

Prices collected each month are those in effect on the 15th of the month or the nearest prior business day. In a few cases, prices used are averages for the week which includes the 15th. Prices are reported directly to Statistics Canada or are taken from trade publications or from publications of other government departments.

Weights were derived from the 1986 Input/Output tables which provide values at purchasers prices of commodities purchased as intermediate inputs.

Indexes for aggregates of individual raw materials are calculated according to the following formula:

Les prix recueillis chaque mois sont ceux en vigueur le 15 du mois ou le jour ouvrable qui le précède immédiatement. Dans certains cas, les prix relevés représentent la moyenne des prix de la semaine englobant le 15 du mois. Les prix sont soit déclarés directement à Statistique Canada, soit tirés de revues spécialisées ou de publications d'autres organismes gouvernementaux.

Les pondérations furent dérivées des tableaux d'entréessorties de 1986, qui fournissent les valeurs aux prix d'achat des produits acquis à titre d'entrées intermédiaires.

Les indices pour les agrégats de matières brutes individuelles sont dégagés à l'aide de la formule suivante:

$$P_{t/o}^{(agg)} = \sum_{i} \frac{w^{i}}{\sum_{w^{i}}} \cdot P_{t/o}^{i}$$

| P <sub>t/o</sub> | denotes the composite price index movement between the base period o and time t for the defined aggregate; | Pt/o             | dénote le mouvement de l'indice composite de prix<br>entre la période de référence o et la période courante<br>t pour l'agrégat spécifié; |
|------------------|--|------------------|---|
| Wİ               | is the transaction value of the element i in 1986;   | wi               | est la valeur de transaction de l'élément i en 1986;  |
| P <sub>t/o</sub> | is the price index for element i, meaning its price change from the base period o to time t;               | P <sub>t/o</sub> | est l'indice de prix de l'élément i, c'est-à-dire son<br>changement de prix de la période de référence o à la<br>période courante t;      |
| $\sum_{i}$       | indicates summation over all elements i in the defined aggregate.  | $\Sigma_{i}$     | indique la sommation sur tous les éléments i faisant partie de l'agrégat spécifié.  |

(agg)

Within individual commodity indexes, the prices are weighted according to their market share in a recent year. In a few instances, where data are not available. the price quotations are equally weighted.

#### Reference Document

(agg)

See reference document in IPPI. Document contains the weighting pattern of the Raw Materials Price Indexes.

For further details, please contact Prices Division, Statistics Canada. Ottawa, Ontario K1A 0T6. telephone (613)951-9607 or 951-3350, facsimile (613)951-2848.

L'intérieur des indices individuels des produits, les prix sont pondérés selon leurs parts du marché pour une année récente. Dans quelques cas où les données ne sont pas disponibles, les cotes de prix ont des pondérations équivalentes.

#### Document de référence

## ELECTRIC POWER SELLING PRICE INDEXES (NON-RESIDENTIAL), 1986 = 100

Electric Power Selling Price Indexes are published on a regional and provincial basis for two broad industrial customer categories of sales; for bills less than 5000 KW and for sales of 5000 KW or more. Prices are reported by electric utilities for non-interruptible power contracts with manufacturing, service, and other Canadian industrial customers. Monthly prices are collected from all major generating and distributing utilities three times a year. The resulting indexes are released with other monthly Industry Price Indexes for April, August and December of each year. The indexes have 1986 as a time reference base and the weights used are 1986 company revenues from sales of electricity, as collected by Prices Division.

The formula used to calculate the Electric Power Selling Price Indexes is a fixed weighted index formulation, which is the same as that described for the Industrial Product Price Indexes, 1986 = 100, technical notes presented above. The indexes are available on CANSIM in matrix 2020. Indexes for the current year and the previous year are subject to revision.

These indexes are a continuation of the previously published Electricity Selling Price Indexes, 1981 = 100. The new, 1986 = 100 indexes can be linked with their equivalents in the 1981 = 100 series using the link factors which were released in the July 1990 issue and repeated in the December issue of this publication.

For further details, please contact Prices Division, Statistics Canada, Ottawa, Ontario K1A 0T6, telephone (613)951-9607 or 951-3350, facsimile (613)951-2848.

#### INDICES DES PRIX DE VENTE DE L'ÉNERGIE ÉLECTRIQUE (NON RÉSIDENTIELLE), 1986 = 100

Les indices des prix de vente de l'énergie électrique sont publiés, par région et par province, pour deux grandes catégories de clients industriels, soit les factures de moins de 5000 kW et les factures de 5000 kW et plus. Les prix sont déclarés par les services publics d'électricité pour des contrats d'énergie non susceptible d'être interrompue, conclus avec des manufacturiers, des services et d'autres clients industriels canadiens. Les prix mensuels sont relevés trois fois par année auprès de tous les grands services de production et de distribution d'énergie. Les indices établis, accompagnant d'autres indices mensuels des prix de l'industrie, sont diffusés chaque année aux mois d'avril. d'août et de décembre. Les indices ont comme période de référence 1986, et les pondérations sont fondées sur les recettes au titre des ventes qu'ont touchées les entreprises en 1986, telles que recueillies par la Division des prix.

Le calcul des indices des prix de vente de l'énergie électrique se fait à l'aide d'une formule d'indice à pondération fixe, identique à celle décrite ci-dessus dans les notes techniques des Indices des prix des produits industriels, 1986 = 100. Les indices sont disponibles par l'entremise de CANSIM sur la matrice 2020. Les indices de la présente année et de l'année précédente sont sujets à révision.

Ces indices constituent la suite des indices des prix de vente de l'énergie électrique, 1981 = 100, précédemment publiés. Les nouvelles séries basées 1986 = 100 peuvent être raccordées à leurs séries équivalentes basées 1981 = 100 en utilisant les facteurs de raccordement. Ces derniers sont publiés dans le numéro de juillet 1990 et répétés dans le numéro de décembre de la présente publication.

Pour plus de renseignements, veuillez contacter la Division des prix, Statistique Canada, Ottawa, Ontario K1A 0T6, téléphone (613)951-9607 ou 951-3350, télécopieur (613)951-2848.

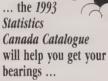

# PICK A TOPIC ... ANY TOPIC

The 1993 Statistics Canada Catalogue is your guide to the most complete collection of facts and figures

on Canada's changing business, social and economic environment. No matter what you need to know, the Catalogue will point

you in the right direction.

From the most popular topics of the day – like employment, income, trade, and education – to specific research studies – like mineral products shipped from Canadian ports and criminal victimization in urban areas – wou'll find it all

The Catalogue puts all this information at your fingertips. With the expanded index, you can search by subject. author or title – even periodical articles are indexed. There's also a separate index for all our electronic products.

The *Catalogue* has everything you need to access all Statistics Canada's products:

- descriptions of over 200 new titles, plus succinct abstracts of the over 900 titles and 7 map series already produced;
- newly released 1991 Census products;
- a complete
  guide to
  finding
  and using
  statistics:
- electronic products in a variety of media, and advice on getting expert assistance on electronic products and on-line searches;
- tabs to each section so you can immediately flip to the information you need.

## ... time and time again

To make sure that the Catalogue stands up to frequent use, we used a specially coated cover to prevent broken spines, tattered edges and dog-eared corners.

Order today you'll be lost without it.

### CHOISISSEZ UN SUJET ... N'IMPORTE LEQUEL

Le Catalogue de Statistique
Canada 1993 est votre guide
pour la collection la plus
complète de faits et de chiffres
dans les domaines, en constante
évolution, du commerce, de la
société et de l'économie du Canada.
Peu importe ce que vous voulez
savoir, le Catalogue

vous mettra sur la bonne piste.

actuels les plus populaires

 comme l'emploi, le revenu, le commerce et l'éducation – à des études de recherche spécialisées

- comme les produits minéraux expédiés des ports canadiens et la victimisation dans les régions urbaines - vous trouverez tout dans ce document.

... le Catalogue de Statistique Canada 1993 vous aidera à vous orienter ...

Le Catalogue vous met tous ces renseignements sous la main. L'index augmenté vous permet de chercher par sujet, auteur ou titre - les articles de périodiques sont même indexés. On a aussi ajouté un index séparé pour tous nos produits électroniques. Le *Catalogue* a tout ce qu'il vous faut pour vous procurer les produits de Statistique Canada :

- descriptions de plus de 200 nouveaux titres et courts résumés des 900 titres et plus et des 7 séries de cartes déjà disponibles;
- produits du Recensement de 1991 récemment publié;
- un guide complet pour obtenir et utiliser les données statistiques;
- produits électroniques sur supports divers et conseils sur l'obtention d'aide d'experts pour les produits électroniques et les recherches en direct;
- système d'onglets pour chaque section – pour que vous puissiez immédiatement repérer les renseignements qui vous intéressent.

## ... maintes et maintes fois

Pour garantir que le Catalogue puisse résister à une utilisation fréquente, nous avons utilisé une couverture avec un revêtement spécial conçue pour éviter les dos cassés, les bords abimés et les coins de page pliés.

Commandez aujourd'hui - vous ne pourrez plus vous passer de lui.

MERCIODE VOTRE COMMANDE!

Statistique Canada

Statistics Canada Canadä

# ARE YOU CONCERNED ABOUT CANADA'S COMPETITIVENESS IN THE GLOBAL MARKETPLACE?

You are not alone. Goods, money, information and technology are flowing across borders at an unprecedented pace. In order for us to be key players, we must keep informed. We must know:

- · how our products are sold to other countries
- how to assess the foreign competition

Statistics Canada offers you five publications on the subject that can broaden your understanding of Canada's dealings with other countries.

#### CANADA'S INTERNATIONAL INVESTMENT POSITION

This publication gives a snapshot of Canada's international financial position, showing who's investing in what, in Canada and abroad at year end. Especially valuable analytical information is also provided on the relative position of both Canadian and foreign ownership and control of capital employed in Canada.

PRICE: \$37 (Cat. No. 67 -202)

#### SECURITY TRANSACTIONS WITH NON-RESIDENTS

Find out who's trading what on security markets with this monthly publication which presents Canada's trading in stocks, bonds and money market paper with non-residents. The December issue includes a description of sources and methods as well as complete data for the year.

PRICE: \$158 (Cat. No. 67 -002)

## CANADA'S BALANCE OF INTERNATIONAL PAYMENTS (HISTORICAL STATISTICS 1926 TO 1990)

For the first time, balance of payments data are available in the same format from 1926 to 1990, in one publication. You get:

- all the historical data in one place!
- summary tables for the current and capital accounts.
- selected additional data such as exchange rates and gross domestic product.

...all in one compact, well-presented publication!

PRICE: \$50

#### CANADA'S INTERNATIONAL TRANSACTIONS IN SERVICES

This annual report looks at our international pattern of trade in services; travel, freight, business services, government and other services.

PRICE: \$32 (Cat. No. 67 -203)

#### CANADA'S BALANCE OF INTERNATIONAL PAYMENTS

Need a complete picture of Canada's international transactions? Then refer to this quarterly publication which outlines merchandise, services, investment income and transfers of the current account; and the financial transactions of the capital account. Transactions are shown for six geographical areas.

PRICE: \$110

# LA SITUATION CONCURRENTIELLE DU CANADA SUR LES MARCHÉS INTERNATIONAUX VOUS PRÉOCCUPE-T-ELLE?

Vous n'êtes pas les seuls. Les produits, l'argent, l'information et la technologie franchissent les frontières à un rythme encore jamais vu. Si nous voulons faire partie des joueurs clés, nous devons être informés sur :

- comment nos produits sont vendus aux autres pays
- comment évaluer la place du Canada dans la concurrence étrangère

À ce sujet, Statistique Canada met à votre disposition cinq publications qui peuvent élargir votre compréhension des relations économiques du Canada avec les autres pays.

#### BILAN DES INVESTISSEMENTS INTERNATIONAUX DU CANADA

Cette publication donne un instantané de la position financière internationale du Canada et montre qui investit dans quoi au Canada et à l'étranger, en fin d'année. S'y retrouvent aussi des renseignements sur l'importance de la propriété et du contrôle canadiens et étrangers du capital employé au Canada.

PRIX: 37 \$ (N°. 67 -202 au cat.)

#### BALANCE DES PAIEMENTS INTERNATIONAUX DU CANADA (STATISTIQUES HISTORIQUES 1926 à 1990)

Pour la première fois, les données de la balance des paiements sont présentées sous le même format de 1926 à 1990 dans une seule publication. Vous y trouverez :

- toutes les données historiques dans le même volume!
- des tableaux sommaires pour le compte courant et le compte de capital
- des données supplémentaires choisies, telles que les taux de change et le produit intérieur brut ...et tout ceci, dans une publication unique, compacte et bien présentée!

PRIX: 50 \$

Pour commander, prière d'écrire au Service de la Vente des publications de Statistique Canada, Ottawa (Ontario) K1A 0T6, ou de communiquer avec le centre régional de consultation de Statistique Canada le plus proche (la liste apparaît dans cette publication).

Pour commander plus rapidement, utilisez votre carte VISA ou MasterCard et appelez sans frais au

## THE COMPLETE PICTURE ON SURFACE AND MARINE

# RANZOTATON

#### SAVE 20% WHEN YOU INVEST IN 4 LEADING EDGE PUBLICATIONS

eregulation, free trade and global integration all affect the face of the transportation industry – and make it essential to stay on top of all aspects of the industry.

When all the rules are changing, data on how the industry is evolving is crucial. And Statistics Canada has put together a special 4-publication package of data you can count on for information on all areas of surface and marine transportation.

#### Trucking in Canada

A complete analytical overview of changes in the industry and specific statistics on everything from Canada-U.S. trucking traffic to fuel use are covered in this annual publication.

Cat. No. 53-222. Annual. **\$45** (plus GST) in Canada, US**\$54** in the United States, and US**\$63** in other countries.

#### Rail in Canada

Includes an overview of the structure and activity of the rail industry. The financial, operating and commodity statistics provide a comprehensive framework for intermodal comparisons. And data on the origin and destination of international commodity movements are vital for studying the effects of free trade and other global developments.

Cat. No. 52-216. Annual. \$45 (plus GST) in Canada, US\$54 in the United States, and US\$63 in other countries.

#### Shipping in Canada

Major indicators on vessel traffic and port traffic data (including 41 commodity groups, containerized cargo and the ports of origin and destination)

Cat. No. 54-205. Annual. **\$41** (plus GST) in Canada, US**\$49** in the United States, and US**\$57** in other countries.

#### Surface and Marine Transport Bulletin

Eight issues a year keep you informed on the latest transportation statistics, including the Quarterly Motor Carrier Freight data.

And much more.

Cat. No. 50-002. Eight issues per year. \$75 (plus GST) in Canada, US\$90 in the United States, and US\$105 in other countries.

#### The Special Transportation Package

will keep you up-to-date on new trends, industry comparisons and leading indicators.

Best of all, you save 20% when you invest in all four publications! Order the *Special Transportation Package* and pay only \$165 (plus GST) in Canada, US\$198 in the U.S. and US\$230 in other countries. Quote package number 10-234.

#### To order write:

Marketing Division, Publication Sales, Statistics Canada, Ottawa, Ontario, K1A 0T6.

For faster ordering, call **1 800 267-6677**, or fax **(613) 951-1584**. Or contact the Statistics Canada Regional Reference Centre listed in this publication.

## POUR TOUT SAVOIR SUR LES

## RAIDPORD

MARITIME ET TERRESTRE

#### ÉPARGNEZ 20 % À L'ACHAT DE QUATRE PUBLICATIONS D'AVANT-GARDE

a déréglementation, le libre-échange et l'intégration globale sont tous des facteurs qui influent sur le secteur des transports. Il est donc essentiel de suivre l'évolution de tous les aspects de ce secteur.

Il est crucial de posséder des données sur l'évolution d'un secteur lorsque celui-ci fait l'objet d'une déréglementation. Statistique Canada a créé une série spéciale de quatre publications qui présentent des données sur tous les aspects des transports maritime et terrestre.

#### Le camionnage au Canada

Cette publication comporte une analyse détaillée de l'évolution de ce secteur d'activité, ainsi que des statistiques précises sur des sujets variés, du trafic entre le Canada et les États-Unis à la consommation de carburant.

Publication annuelle nº 53-222 au catalogue. 45 \$ (TPS en sus) au Canada, 54 \$ US aux États-Unis et 63 \$ US dans les autres pays.

#### Le transport ferroviaire au Canada

Cette publication présente un aperçu de la structure et des activités du secteur du transport ferroviaire. Les données détaillées sur les finances, l'exploitation et les marchandises transportées permettent d'établir des comparaisons entre les différents modes de transport. Par ailleurs, les données sur l'origine et la destination des mouvements internationaux de marchandises sont essentielles à l'étude des effets du libre-échange et d'autres événements internationaux.

Publication annuelle n° 52-216 au catalogue. 45 \$ (TPS en sus) au Canada, 54 \$ US aux États-Unis et 63 \$ US dans les autres pays.

#### Le transport maritime au Canada

La publication présente d'importants indicateurs sur le trafic des navires et le trafic portuaire (y compris 41 groupes de marchandises, le fret conteneurisé ainsi que les ports d'origine et de destination).

Publication annuelle nº 54-205 au catalogue. 41 \$ (TPS en sus) au Canada, 49 \$ US aux États-Unis et 57 \$ US dans les autres pays.

#### Bulletin de service sur les transports terrestre et maritime

Dans les huit numéros, vous trouverez les statistiques les plus récentes sur les transports, ainsi que les données de l'Enquête trimestrielle sur les transporteurs routiers de marchandises, et plus encore.

Publication nº 50-002 au catalogue. Huit numéros par année au coût de **75** \$ (TPS en sus) au Canada, **90** \$ US aux États-Unis et **105** \$ US dans les autres pays.

### Grâce à cette série spéciale de publications sur les transports

vous serez informé des nouvelles tendances, des comparaisons établies et des indicateurs clés.

En plus, vous obtenez un rabais de 20 % à l'achat des quatre publications. Commandez la *série spéciale sur les transports* et ne payez que 165 \$ (TPS en sus) au Canada, 198 \$ US aux États-Unis et 230 \$ US dans les autres pays. Citez la série n° 10-234.

#### Pour commander, écrivez à:

Division de la commercialisation, Vente des publications, Statistique Canada, Ottawa (Ontario) K1A 076. Pour commander plus rapidement, composez le 1-800-267-6677 ou télécopiez votre commande au (613) 951-1584. Vous pouvez également vous adresser à l'un des centres régionaux de consultation de Statistique Canada qui figurent dans la publication.

#### **Note of Appreciation**

Canada owes the success of its statistical system to a long-standing cooperation involving Statistics Canada, the citizens of Canada, its businesses and governments. Accurate and timely statistical information could not be produced without their continued cooperation and goodwill.

#### Note de reconnaissance

Le succès du système statistique du Canada repose sur un partenariat bien établi entre Statistique Canada et la population, les entreprises et les administrations canadiennes. Sans cette collaboration et cette bonne volonté, il serait impossible de produire des statistiques précises et actuelles.

## **Symbols**

The following standard symbols are used in Statistics Canada publications:

- .. figures not available.
- ... figures not appropriate or not applicable.
- nil or zero.
- -- amount too small to be expressed.
- p preliminary figures.
- r revised figures.
- x confidential to meet secrecy requirements of the Statistics Act.

## NOTE ON CANSIM

CANSIM® (Canadian Socio-Economic Information Management System) is Statistics Canada's computerized data bank and its supporting software. Most of the data appearing in this publication, as well as many other data series are available from CANSIM via terminal, on computer printouts, or in machine readable form. Historical and more timely data, not included in this publication, are available from CANSIM.

For further information write to Marketing Division, Statistics Canada, Ottawa, K1A 0T6 or call (613) 951-8200.

Registered Trade Mark of Statistics Canada.

#### Revision

Unless otherwise stated, price indexes in this publication are subject to revision for the most recent six months shown. Any revisions beyond these limits are so indicated.

The paper used in this publication meets the minimum requirements of American National Standard for Information Sciences – Permanence of Paper for Printed Library Materials, ANSI Z39.48 – 1984.

## Signes conventionnels

Les signes conventionnels suivants sont employés uniformément dans les publications de Statistique Canada:

- .. nombres non disponibles.
- ... n'ayant pas lieu de figurer.
- néant ou zéro.
- -- nombres infimes
- p nombres provisoires.
- r nombres rectifiés.
- x confidentiel en vertu des dispositions de la Loi sur la statistique relatives au secret.

## NOTE CONCERNANT CANSIM

Le CANSIM® (Système canadien d'information socio-économique) est le système de Statistique Canada qui se compose d'une banque de données informatisées et de son logiciel de soutien. La plupart des données présentées dans cette publication et beaucoup d'autres données contenues dans le CANSIM peuvent être extraites par l'intermédiaire d'un terminal, sous forme d'imprimés d'ordinateur ou sous forme lisible par machine. Des données historiques et des données plus actuelles qui n'apparaissent pas dans cette publication sont disponibles de CANSIM.

Pour plus de renseignements, écrivez à la Division du marketing, Statistique Canada, Ottawa, K1A 0T6 ou téléphonez à (613) 951-8200.

Marque déposée de Statistique Canada.

#### Révisions

Sauf avis contraire, les indices de prix contenus dans la présente publication sont susceptibles d'être révisés pour les six derniers mois indiqués. Toute révision portant sur une plus longue période est indiquée.

Le papier utilisé dans la présente publication répond aux exigences minimales de l'"American National Standard for Information Sciences" – "Permanence of Paper for Printed Library Materials", ANSI Z39.48 – 1984.

This publication was prepared under the direction of:

- Michel Jacod, Director, Prices Division
- Robin Lowe, Chief, Goods & Services Producing Industries Section

The Goods and Services Producing Industries Section would like to thank two important members of the Industrial Price programme who have retired in the last few months:

**Elaine Hughes,** who worked in Prices Division for 28 years, largely as a commodity specialist on the Pulp and Paper Industries; and

Manse Lahaise, who worked in Prices for 32 years as a commodity specialist, looking after the Transportation Equipment Industries for most of that time.

We would also like to thank **Nathalie Cyr** for her support in the production of this monthly publication, and for responding to numerous client requests.

Cette publication a été rédigée sous la direction de:

- Michel Jacod, Directeur, Division des prix
- Robin Lowe, Chef, Section des Industries de biens et de services

La Section des Industries de biens et de services remercie sincèrement et offre ses meilleurs souhaits à deux membresclés du personnel du programme des prix industriels qui ont pris leur retraite au cours des derniers mois:

**Elaine Hughes** qui a travaillé à la Division des prix pendant 28 ans comme spécialiste des prix des produits de l'industrie des pâtes et papier; et

Manse Lahaise qui a travaillé 32 ans à la Division des prix surtout comme spécialiste des prix de l'industrie du matériel de transport.

Nous désirons remercier également Nathalie Cyr pour son rôle dans la production de cette publication mensuelle, et pour avoir répondu à de nombreuses demandes d'information.

## **Highlights**

#### Industrial Products Price Index

According to preliminary figures, the Industrial Product Price Index (IPPI, 1986 = 100) remained unchanged at March's revised level of 112.3. Thirteen of the 21 major groups of products registered increases in their indices while four decreased and four did not change. The most significant changes of price levels were in the areas of lumber, sawmill and other wood products (-2.8%), of automobiles, trucks and other transport equipment (+0.6%), and of chemicals and chemical products (-0.6%). There were also changes of importance in the areas of primary metal products (-0.5%), of paper and paper products (+0.7%) and of meat, fish, and dairy products (+0.5%).

During April, the value of the US dollar rose 1.2% against the Canadian dollar, increasing the value of export prices quoted in American dollars. This particularly affected the index for automobiles, trucks, and other transport equipment. In April 1993, the American dollar was 6.9% higher against the Canadian dollar than in April 1992.

The IPPI was 3.9% higher in April 1993 than in April 1992. This year-to-year change was higher than those which occurred in the last two months, March and February, but is still lower than the 4.3% increase in January. The most important price increases over the last twelve months were in lumber, sawmill and other wood products (31.9%), autos, trucks, and other transport equipment (6.4%), meat, fish, and dairy products (4.7%), and petroleum and coal products (6.7%). There was only one decrease of any significance, a 2.2% decline in primary metal products. Excluding petroleum and coal products, the 12-month change for the index was 3.8%.

The intermediate goods index has been fluctuating between 110.0 and 110.8 since January 1993, while the finished goods index has been fluctuating between 114.0 and 114.6 since November 1992. In April, the first stage intermediate goods price index recorded a 0.7% decline from March 1993 and a 2.1% decline from April 1992, while the second stage intermediate goods index remained unchanged from March 1993 but showed a 6.1% increase over April 1992. The three finished goods indices all recorded both monthly and year-to-year increases. The monthly increases ranged between 0.2% for finished foods and feeds to 0.5% for capital equipment. The year-to-year increases ranged from 2.2% for finished foods and feeds to 4.1% for capital equipment.

The lumber, sawmill and other wood products price index recorded a decline of -2.8% in April after having recorded five consecutive monthly increases, but it was still 31.9% higher than in April 1992. This decline was primarily due to a 5.3% decline in the softwood price index. Prices for softwood lumber fell most on the Prairies, in Quebec and in Atlantic Canada, where declines over 10% were recorded, and fell least in British Columbia, where the overall decline was 1.6%. The coast of British Columbia even recorded a 2.7% increase in prices, as Hemlock and Fir more than recovered from a decline in March, and as Douglas Fir and Western Red Cedar continued to increase. For the last few months, British Columbian softwood prices have been leading the Canadian softwood lumber market.

## Faits saillants

#### Indice des prix des produits industriels

D'après les chiffres provisoires, l'indice des prix des produits industriels (IPPI, 1986 = 100) est demeuré inchangé par rapport au niveau révisé de 112.3 enregistré en mars. Treize des 21 principaux groupes de produits ont affiché une progression de leur indice, tandis que quatre ont diminué et quatre n'ont pas varié. Les principales variations des prix ont été observées dans les secteurs suivants: sciages, produits de scierie et divers (-2.8%), voitures, camions et autre matériel de transport (+0.6%), et produits chimiques (-0.6%). D'importantes variations ont également été notées pour les produits métalliques primaires (-0.5%), le papier et les produits connexes (+0.7%) et la viande, le poisson et les produits laitiers (+0.5%).

En avril, la valeur du dollar américain a augmenté de 1.2% par rapport au dollar canadien, ce qui a haussé la valeur des prix des exportations libellées en dollar américain. Cette appréciation a touché en particulier l'indice des vortures, camions et autre matériel de transport. En avril 1993, l'appréciation de la devise américaine par rapport à la devise canadienne était de 6.9% de plus qu'en avril 1992.

L'IPPI était 3.9% plus élevé en avril 1993 qu'en avril 1992. Cette variation d'une année à l'autre était supérieure à celles enregistrées au cours des deux derniers mois (mars et février), mais quand même inférieure à l'augmentation de 4.3% observée en janvier. Les hausses les plus importantes au cours des douze derniers mois ont été enregistrées pour les sciages, les produits de scierie et divers (31.9%), les voitures, les camions et autre matériel de transport (6.4%), la viande, le poisson et les produits laitiers (4.7%), et les produits du pétrole et du charbon (6.7%). On a constaté une seule diminution importante, soit un recul de 2.2% des produits métalliques primaires. Si l'on exclut les produits du pétrole et du charbon, la variation sur douze mois de l'indice a été de 3.8%.

L'indice des produits semi-finis a varié entre 110.0 et 110.8 depuis janvier 1993, tandis que l'indice des produits finis a fluctué entre 114.0 et 114.6 depuis novembre 1992. En avril, l'indice des produits semi-finis de première étape a règressé de 0.7% par rapport à mars 1993 et de 2.1% par rapport à avril 1992, alors que l'indice des produits semi-finis de deuxième étape est demeuré inchangé par rapport à mars 1993, mais s'est accru de 6.1% par rapport à avril 1992. Les trois indices des produits finis ont affiché des hausses mensuelles et des hausses d'une année à l'autre. Les augmentations mensuelles vont de 0.2% pour les aliments de consommation et les aliments pour animaux à 0.5% pour le matériel capitalisé. Les hausses d'une année à l'autre se situent entre 2.2% pour les aliments de consommation et les aliments pour animaux et 4.1% pour le matériel capitalisé.

L'indice des prix du bois d'oeuvre, du sciage et d'autres produits du bois a chuté de 2.8% en avril après avoir augmenté pendant cinq mois consécutifs. Le niveau a toutefois été établi à 31.9% de plus que le niveau enregistré en avril 1992. La chute était surtout attribuable à une baisse de 5.3% de l'indice des prix du bois résineux. Les prix du bois résineux ont chuté le plus dans les Prairies, au Québec et dans la région de l'Atlantique où l'on a enregistré une baisse de plus de 10%. Ils ont chuté le moins en Colombie-Britannique (1.6%). On a même enregistré une augmentation de 2.7% des prix du bois du littoral de la Colombie-Britannique, les prix de la pruche et du sapin ayant progressé fortement après une baisse en mars et ceux du sapin de Douglas et du thuya géant de l'ouest ayant poursuivi leur hausse. Depuis quelques mois, les prix du bois résineux en Colombie-Britannique dominent le marché canadien du bois de construction de résineux.

The automobiles, trucks and other transportation equipment price index rose 0.6% in April and stood 6.4% higher than a year ago, primarily due to increases in automobile and truck prices. Contributing to this was the effect of the change in the valuation of the Canadian dollar on the price of exports. Domestic automobile prices were 0.3% higher than in March 1993 and 4.3% higher than in April 1992, while export prices were up 1.2% and 8.7% respectively. The situation for trucks was basically similar. Domestic trucks showed no increase over March 1993 and a 6.1% increase over April 1992 while export trucks showed increases of 1.2% and 11.0% respectively.

The chemical and chemical products price index was -0.6% down from March 1993, but still stood 1.1% higher than in April 1992. The primary downward pressure on the month-to-month change came from the price of organic chemicals, which were 3.7% down from March 1993, while the primary support for the year-to-year increase came from synthetic resins, which prices were 4.3% higher than in April 1992

The primary metal products price index recorded a 0.5% fall from March 1993, its third consecutive monthly decline. This fall resulted from price index declines of 5.0% in copper and copper alloy products, 2.4% in nickel products, and 1.3% in aluminum products. The value of the primary metal products price index in April has been lower than in the previous April for the last 4 years. Overall, the index has fallen 2.2%, 8.4%, 12.4%, and 24.6% from April 1992, April 1991, April 1990, and April 1989 respectively. Since April 1989, iron and steel prices have fallen 9.1%, aluminum product prices by 38.9%, copper and copper alloy products by 28.8%, nickel products by 68.6%, and other non-ferrous metal products by 25.1%.

The meat, fish, and dairy products index saw a sixteenth consecutive monthly increase, rising 0.5% from March 1993, primarily due to a 0.7% increase in beef and veal prices and a 0.9% increase in pork prices. The index has risen 7.1% from January 1990, due primarily to slow but steady price increases for these meats. Since January 1990, pork prices have risen 23.4% and beef and veal prices have risen 14.1%.

L'indice des prix des automobiles, des camions et d'autre matériel de transport a progressé de 0.6% en avril et s'est établi à 6.4% de plus que l'année précédente. Cette hausse est en partie attribuable aux effets de la variation du dollar canadien sur les prix des exportations. Les prix intérieurs des automobiles se sont établis à 0.3% de plus qu'en mars 1993 et à 4.3% de plus qu'en avril 1992; les prix des exportations ont augmenté de 1.2% et de 8.7% respectivement. La situation en ce qui concerne les camions était semblable: les prix intérieurs des camions n'ont pas augmenté par rapport à mars 1993 mais ont progressé de 6.1% par rapport à avril 1992. Les prix des exportations de camions ont bondi de 1.2% et de 11.0% respectivement.

L'indice des produits chimiques a chuté de 0.6% par rapport à mars 1993, mais s'est établi à 1.1% de plus qu'en avril 1992. La variation d'un mois à l'autre est principalement attribuable aux prix des produits chimiques organiques qui ont chuté de 3.7% par rapport à mars 1993; cependant, la hausse d'une année à l'autre est surtout attribuable aux résines synthétiques dont les prix se sont établis à 4.3% de plus qu'en avril 1992.

L'indice des prix des produits métalliques de première transformation a chuté pour un troisième mois consécutif, soit de 0.5% par rapport à mars 1993. Cette chute est attribuable à la baisse des prix (5.0%) des produits du cuivre et des alliages de cuivre, des produits du nickel (2.4%) et des produits de l'aluminium (1.3%). L'indice des prix des produits métalliques de première transformation d'avril 1993 était inférieur à ceux observés en avril au cours des quatre dernières années. Dans l'ensemble, l'indice a chuté de 2.2%, 8.4%, 12.4% et 24.6% par rapport à avril 1992, avril 1991, avril 1990 et avril 1989 respectivement. Depuis avril 1989, les prix des produits du fer et de l'acier ont régressé de 9.1%, ceux des produits du l'aluminium, de 38.9%, ceux des produits du cuivre et des alliages de cuivre, de 28.8%, ceux des produits du nickel, de 68.6% et ceux des autres produits des métaux non ferreux, de 25.1%.

L'indice de la viande, du poisson et des produits laitiers a augmenté pour un seizième mois consécutif, soit de 0.5% par rapport à mars 1993, en raison, surtout, de la hausse de 0.7% du prix du boeuf et du veau et de 0.9% du prix du porc. L'indice a bondi de 7.1% par rapport à janvier 1990 en raison, principalement, de l'augmentation lente mais continue des prix de ces viandes. Depuis janvier 1990, le prix du porc a augmenté de 23.4% et celui du veau, de 14.1%.

## Highlights

#### Raw Materials Price Index

Preliminary data indicate the Raw Materials Price Index (RMPI, 1986 = 100) for April 1993 was 113.8, up 1.5% from the previous month. Six of the seven major indexes were higher in April, with wood registering the largest increase (6.2%). The upward movement was moderated somewhat by a 2.3% drop in the non-ferrous metals index. The RMPI excluding mineral fuels rose 1.7% in April 1993.

The RMPI for April 1993 was 11.2% higher than the April 1992 level, mainly because of rising indexes for wood (37.7%), mineral fuels (9.5%), and animals and animal products (6.1%). Of the seven major indexes, only that for non-ferrous metals declined from April 1992 to April 1993. The RMPI excluding mineral fuels rose 12.0% over this twelve-month period.

The 6.2% increase in the April 1993 wood index was primarily due to the 7.8% rise in the logs and bolts index, which pursued its upward trend begun in December 1991. Compared with the April 1992 level, the wood index was up 37.7% owing to a 51.6% increase in the logs and bolts index.

The mineral fuels index rose 1.1% in April 1993, led by a 1.3% increase in its principal component, crude mineral oil, and a 0.4% increase in the coal index. The natural gas index declined 4.0%, its first monthly decrease since July 1992. The mineral fuels index was up 9.5% from April 1992. All three major components of this index posted increases over the twelve-month period, but the 10% rise in crude mineral oil was responsible for most of the mineral fuels index increase.

The April 1993 vegetable products index was up 1.4%, reflecting higher prices for unrefined sugar (7.2%) and grains (3.0%). These increases were offset by decreases in the indexes for cocoa, coffee and tea (-6.7%) and natural rubber and allied gums (-3.5%). The vegetable products index was up 5.6% from a year earlier, reflecting higher indexes for oilseeds (17.0%), unrefined sugar (19.5%) and raw tobacco (9.7%). Lower indexes for cocoa, coffee and tea (-10%) and fresh fruit (-17.8%) were moderating factors.

The animals and animal products index posted a small increase of 0.4% in April 1993 owing largely to a 1.0% increase in the cattle and calves index. From April 1992 to April 1993 the animals and animal products index increased 6.1%. The major contributing factors were index increases for cattle and calves (13.1%) and hogs for slaughter (16.6%).

The non-ferrous metals index was down 2.3% in April 1993 because of index declines in copper concentrates (-8.3%) and non-ferrous scrap (-6.2%). These decreases were partly offset by the 4.7% rise in the precious metals index. The twelve-month decline in the non-ferrous metals index was 2.1%, mainly owing to falling indexes for concentrates of copper (-6.5%), zinc (-17.4%), nickel (-16.9%), and aluminum materials (-7.4%). Higher indexes for radioactive concentrates (27.7%) and precious metals (6.1%) compensated for these declines.

## Faits saillants

## Indice des prix des matières brutes

D'après les chiffres préliminaires, l'indice des prix des matières brutes (IPMB, 1986 = 100) a atteint 113.8 en avril 1993, soit une augmentation de 1.5% par rapport au mois précédent. Six des sept indices majeurs ont enregistré des hausses, la plus importante étant celle du bois (6.2%). L'effet à la hausse a été légèrement atténué par une baisse de 2.3% de l'indice des métaux non ferreux. L'augmentation de l'IPMB sans la composante des combustibles minéraux a été de 1.7% au cours du mois d'avril 1993.

Par rapport au mois d'avril 1992, l'IPMB a progressé de 11.2%, principalement en raison des augmentations des indices du bois (37.7%), des combustibles minéraux (9.5%) et des animaux et substances animales (6.1%). Parmi les sept indices majeurs, seul l'indice des métaux non ferreux a connu une diminution entre avril 1992 et avril 1993. D'avril 1992 à avril 1993, l'IPMB sans la composante des combustibles minéraux a augmenté de 12.0%.

L'indice du bois a progressé de 6.2% en avril 1993, en raison de l'augmentation de 7.8% de l'indice des billes et billots, qui poursuit sa croissance entreprise en décembre 1991. Par rapport à avril 1992, l'indice du bois a augmenté de 37.7%, en raison de la hausse de 51.6% de l'indice des billes et billots.

L'indice des combustibles minéraux a augmenté de 1.1% en avril 1993, suite à une hausse de 1.3% de sa principale composante, l'indice des huiles minérales brutes et une hausse de 0.4% de l'indice du charbon. Quant à l'indice du gaz naturel, il a diminué de 4.0%; il s'agit de la première chute mensuelle de cet indice depuis juillet 1992. L'indice des combustibles minéraux a augmenté de 9.5% depuis avril 1992; bien que les trois composantes de cet indice ont connu des hausses, sa progression est surtout attribuable à l'augmentation de 10% de l'indice des huiles minérales brutes.

L'indice des substances végétales est en hausse de 1.4% en avril 1993, à cause de l'augmentation des indices du sucre non raffiné (7.2%) et des céréales (3.0%). Ces augmentations ont été contrebalancées par la baisse des indices du cacao, café, et thé (-6.7%) et du caoutchouc et gommes analogues naturels (-3.5%). Par rapport à avril 1992, l'indice des substances végétales a augmenté de 5.6%, en raison de la hausse des indices des oléagineux (17.0%), du sucre non raffiné (19.5%), et du tabac en feuilles (9.7%). Cependant, la croissance de l'indice fut atténuée par la diminution des indices du cacao, café, et thé (-10%) et des fruits frais (-17.8%).

L'indice des animaux et substances animales a connu une légère progression de 0.4% en avril 1993 qui est attribuable en grande partie à l'augmentation de l'indice des bovins et veaux de 1.0%. D'avril 1992 à avril 1993, l'indice des animaux et substances animales a progressé de 6.1% principalement en raison des augmentations des indices des bovins et veaux (13.1%) et du porc destiné à l'abattage (16.6%).

Quant à l'indice des métaux non ferreux, il a enregistré une baisse de 2.3% en avril 1993 suite à la diminution des indices des concentrés de cuivre (-8.3%) et des déchets de métaux non ferreux (-6.2%). Ces diminutions ont été partiellement atténuées par l'augmentation de l'indice des métaux précieux (4.7%). Au cours des douze derniers mois, l'indice des métaux non ferreux a diminué de 2.1%, principalement à cause de la baisse des indices des concentrés de cuivre (-6.5%), de zinc (-17.4%), de nickel (-16.9%), et des matériaux d'aluminium (-7.4%). Ces baisses ont été atténuées par une hausse des indices des concentrés radio-actifs (27.7%) et des métaux précieux (6.1%).

These indexes are preliminary.
Ces indices sont provisoires.
Revised.
Révised.
Révised.
The aggregation of indexes by commodities or by industries should produce the same grand total. When these totals occasionally differ due to rounding, the All Commodities index shall be regarded as authoritative, and the All Manufacturing Industries is adjusted to match.
L'agrégation des indices par produits ou par industries devrait résulter en un même grand total. Lorsque ces totaux diffèrent occasionnellement en raison de l'arrondissement, l'Indice total – Tous les produits devra être considéré comme celui qui fait autorité, et l'Indice total – Toutes les industries manufacturières sera posé égal. (3)
